# 1 Documentation

## 1.1 Motivation

In the newsgroup `comp.text.tex` there was a discussion [1] about package `fontspec`. Stephan Hennig provided an example to implement ROT13 as OpenType feature [2]. And Robin Fairbairns requested a CTAN upload [3] ⊕.

But I think it would be not fair to the users of old TeX engines without OpenType support that they will not be able to decrypt texts generated by the new package ⊕. Therefore I have written this package that implements ROT13 even for ini-TEx. Also other variants ROT5, ROT18, ROT47 are provided.

## 1.2 Usage

`\EdefRot {\langle type \rangle} {\langle cmd \rangle} {\langle text \rangle}`

The `\langle text \rangle` is expanded and sanitized. All tokens are letters with catcode 12 (other) with the exception of the space token that has character code 32 (0x20) and catcode 10 (space). This follows TeX's convention of `\string` and `\meaning`.

The chiffre type is specified by `\langle type \rangle` it takes a number. For example, ROT13 is specified by 13. The selected chiffre is applied to `\langle text \rangle` and the result is stored in macro `\langle cmd \rangle`.

The following table lists the supported rotation chiffres.

chiffre	from	to
<b>ROT13</b>	A-Z	N-Z A-M
	a-z	n-z a-m
<b>ROT5</b>	0-9	5-9 0-4
<b>ROT18</b>	A-Z 0-9	S-Z 0-9 A-R
	a-z	n-z a-m
<b>ROT47</b>	!-~	P-~ !-0

In case of ROT47 the range is the ASCII range from character codes 33 (0x21) ‘!’ upto 126 (0xFE) ‘~’.

The specifications of the algorithms are taken from the description in Wikipedia [4, 5], ROT18 is further specified by “computerfreak” [6].

### 1.2.1 Examples

The famous English pangram [7] is converted by

```
\EdefRot{13}\result{The quick brown fox jumps over the lazy dog}
```

The result is stored in macro `\result` with the following contents:

```
Gur dhvpx oebja sbk whzcf bire gur ynml qbt
```

Command names are converted to strings before. Therefore the text should not contain TeX markup, example:

```
\EdefRot{13}\result{\texttt{Hello}\par\textit{World}}
\result → Uryyb\inqinapr \cne@qrnguplpyrf \car Jbeyq
```

But macros can be used that contain text. They are expanded.

```

\newcommand{\Name}{Heiko}
\newcommand{\Email}{heiko.oberdiek at googlemail.com}
\edef\rot{13}\result{Hello \Name\space<\Email>}
\result → Uryyb Urvxb <urvxbo.boreqvrx ng tbbtyrznyv.pbz>

```

## 2 Implementation

### 2.1 Reload check and package identification

Reload check, especially if the package is not used with L<sup>A</sup>T<sub>E</sub>X.

## 2.4 \EdefRot as robust macro

The main macro `\EdefRot` is made robust if  $\varepsilon$ -TEX or LATEX are present.

```

\EdefRot
122 \ltx@ifundefined{protected}{%
123   \ltx@ifundefined{DeclareRobustCommand}{%
124     \def\RotCh@temp{\def\EdefRot##1}%
125   }{%
126     \def\RotCh@temp{\ DeclareRobustCommand*\EdefRot[1]}%
127   }%
128 }{%
129   \def\RotCh@temp{\protected\def\EdefRot##1}%
130 }
131 \RotCh@temp{%
132   \RotCh@GetNumber{#1}%
133   \ltx@ifundefined{RotCh@rot@\romannumeral\RotCh@number}{%
134     \PackageError{rotchiffre}{%
135       Unknown chiffre ROT\RotCh@number
136     }{%
137       \EdefSanitize
138     }%
139     \RotCh@rot
140   }%
141 }

```

`\RotCh@GetNumber` If  $\varepsilon$ -TEX is active, then the chiffre number can be an expression supported by `\numexpr`.

```

142 \ltx@ifundefined{numexpr}{%
143   \def\RotCh@GetNumber#1{%
144     \edef\RotCh@number{\number#1}%

## 2.7 \RotCh@rot with big char support

Some modern TeX engines support characters with more than eight bits (codes greater as 255). LuaTeX and XeTeX are detected by the caret notation that is extended by these engines.

## 4 Installation

### 4.1 Download

**Package.** This package is available on CTAN<sup>1</sup>:

[CTAN:macros/latex/contrib/oberdiek/rotchiffre.dtx](http://CTAN.mirror/macros/latex/contrib/oberdiek/rotchiffre.dtx) The source file.

[CTAN:macros/latex/contrib/oberdiek/rotchiffre.pdf](http://CTAN.mirror/macros/latex/contrib/oberdiek/rotchiffre.pdf) Documentation.

---

<sup>1</sup>[ftp://ftp.ctan.org/tex-archive/](http://ftp.ctan.org/tex-archive/)

**Bundle.** All the packages of the bundle ‘oberdiek’ are also available in a TDS compliant ZIP archive. There the packages are already unpacked and the documentation files are generated. The files and directories obey the TDS standard.

[CTAN:install/macros/latex/contrib/oberdiek.tds.zip](#)

TDS refers to the standard “A Directory Structure for T<sub>E</sub>X Files” ([CTAN:tds/tds.pdf](#)). Directories with `texmf` in their name are usually organized this way.

## 4.2 Bundle installation

**Unpacking.** Unpack the `oberdiek.tds.zip` in the TDS tree (also known as `texmf` tree) of your choice. Example (linux):

```
unzip oberdiek.tds.zip -d ~/texmf
```

**Script installation.** Check the directory `TDSScripts/oberdiek/` for scripts that need further installation steps. Package `attachfile2` comes with the Perl script `pdfatfi.pl` that should be installed in such a way that it can be called as `pdfatfi`. Example (linux):

```
chmod +x scripts/oberdiek/pdfatfi.pl
cp scripts/oberdiek/pdfatfi.pl /usr/local/bin/
```

## 4.3 Package installation

**Unpacking.** The `.dtx` file is a self-extracting `docstrip` archive. The files are extracted by running the `.dtx` through plain T<sub>E</sub>X:

```
tex rotchiffre.dtx
```

**TDS.** Now the different files must be moved into the different directories in your installation TDS tree (also known as `texmf` tree):

<code>rotchiffre.sty</code>	→ <code>tex/generic/oberdiek/rotchiffre.sty</code>
<code>rotchiffre.pdf</code>	→ <code>doc/latex/oberdiek/rotchiffre.pdf</code>
<code>test/rotchiffre-test1.tex</code>	→ <code>doc/latex/oberdiek/test/rotchiffre-test1.tex</code>
<code>test/rotchiffre-test2.tex</code>	→ <code>doc/latex/oberdiek/test/rotchiffre-test2.tex</code>
<code>rotchiffre.dtx</code>	→ <code>source/latex/oberdiek/rotchiffre.dtx</code>

If you have a `docstrip.cfg` that configures and enables `docstrip`’s TDS installing feature, then some files can already be in the right place, see the documentation of `docstrip`.

## 4.4 Refresh file name databases

If your T<sub>E</sub>X distribution (teT<sub>E</sub>X, mikT<sub>E</sub>X, ...) relies on file name databases, you must refresh these. For example, teT<sub>E</sub>X users run `texhash` or `mktexlsr`.

## 4.5 Some details for the interested

**Attached source.** The PDF documentation on CTAN also includes the `.dtx` source file. It can be extracted by AcrobatReader 6 or higher. Another option is `pdftk`, e.g. unpack the file into the current directory:

```
pdftk rotchiffre.pdf unpack_files output .
```

**Unpacking with L<sup>A</sup>T<sub>E</sub>X.** The .dtx chooses its action depending on the format:

**plain T<sub>E</sub>X:** Run docstrip and extract the files.

**L<sup>A</sup>T<sub>E</sub>X:** Generate the documentation.

If you insist on using L<sup>A</sup>T<sub>E</sub>X for docstrip (really, docstrip does not need L<sup>A</sup>T<sub>E</sub>X), then inform the autodetect routine about your intention:

```
latex \let\install=y\input{rotchiffre.dtx}
```

Do not forget to quote the argument according to the demands of your shell.

**Generating the documentation.** You can use both the .dtx or the .drv to generate the documentation. The process can be configured by the configuration file ltxdoc.cfg. For instance, put this line into this file, if you want to have A4 as paper format:

```
\PassOptionsToClass{a4paper}{article}
```

An example follows how to generate the documentation with pdflat<sup>A</sup>T<sub>E</sub>X:

```
pdflatex rotchiffre.dtx
makeindex -s gind.ist rotchiffre.idx
pdflatex rotchiffre.dtx
makeindex -s gind.ist rotchiffre.idx
pdflatex rotchiffre.dtx
```
