1 Documentation overview for `hyperref`

The documentation for package `hyperref` consists of several files:

Manual The **USER MANUAL** (also available as HTML).

README The **README** file (also available as text file). Here information is collected that is not yet in the manual: new features, package compatibility, limitations, known problems, ...

ChangeLog This file records the version history (also available as text file).

Options This file provides a short option summary.

Bookmark talk, slides Slides for the talk “PDF information and navigation elements with hyperref, pdfTeX and thumbpdf” at EuroTeX 1999.

Bookmark talk, paper The paper version of the talk.

Source code documentation:

- ☞ **hyperref.dtx** This is the source code documentation for hyperref (this file).
- backref.dtx** “Back referencing from bibliographical citations”
- nameref.dtx** “Section name references in L^AT_EX”

3 File hycheck.tex

Many commands of L^AT_EX or other packages cannot be overloaded, but have to be redefined by hyperref directly. If these commands change in newer versions, these changes are not noticed by hyperref. With this test file this situation can be checked. It defines the command \checkcommand that is more powerful than L^AT_EX's \CheckCommand, because it takes \DeclareRobustCommand and optional parameters better into account.

```
1 /*check*/
2 \documentclass{article}
3 \makeatletter

\checklateX Optional argument: release date of LATEX.
4 \newcommand*\checklateX[1][]{%
5   \typeout{}%
6   \typeout{* Format: 'LaTeX2e' #1}%
7   \typeout{\space\space Loaded: '\fmtname' \fmtversion}%
8 }%

\checkpackage The argument of \checkpackage is the package name without extension optionally followed by a release date.
9 \newcommand*\checkpackage[1]{%
10  \def\HyC@package{\#1}%
11  \let\HyC@date\empty
12  \@ifnextchar[\HyC@getDate\HyC@checkPackage
13 }

\HyC@getDate The release date is scanned.
14 \def\HyC@getDate[#1]{%
15  \def\HyC@date{\#1}%
16  \HyC@checkPackage
17 }

\HyC@checkPackage
18 \def\HyC@checkPackage{%
19   \typeout{}%
20   \begingroup
21     \edef\x{\endgroup
22       \noexpand\RequirePackage{\HyC@package}%
23       \ifx\HyC@date\empty\relax\else[\HyC@date]\fi%
24   }%
25   \x
26   \typeout{}%
27   \typeout{%
28     * Package '\HyC@package'%
29     \ifx\HyC@date\empty
30     \else
31       \space\HyC@date
32     \fi
33   }%
34   \@ifundefined{ver@\HyC@package.sty}{%
35   }{%
36     \typeout{%
37       \space\space Loaded: '\HyC@package' %
38       \csname ver@\HyC@package.sty\endcsname
39   }%
```

```
40  }%
41 }
```

\checkcommand The macro \checkcommand parses the next tokens as a L^AT_EX definition and compares this definition with the current meaning of that command.

```
42 \newcommand*\checkcommand{\checkcommand}[1]{%
43   \begingroup
44   \ifx\long#1\relax
45     \expandafter\HyC@checklong
46   \else
47     \def\HyC@defcmd{#1}%
48     \expandafter\let\expandafter\HyC@next
49       \csname HyC@\expandafter\@gobble\string#1\endcsname
50     \expandafter\HyC@checkcommand
51   \fi
52 }
```

\HyC@checklong The definition command \def or \edef is read.

```
53 \def\HyC@checklong#1{%
54   \def\HyC@defcmd{\long#1}%
55   \expandafter\let\expandafter\HyC@next
56     \csname HyC@\expandafter\@gobble\string#1\endcsname
57   \HyC@checkcommand
58 }
```

\HyC@checkcommand The optional star of L^AT_EX's definitions is parsed.

```
59 \def\HyC@checkcommand{%
60   \ifx\HyC@next\relax
61     \PackageError{hycheck}{%
62       Unknown command `\\expandafter\\strip@prefix\\meaning\\HyC@cmd'%
63     }{\@ehd}
64   \expandafter\endinput
65 \fi
66 \@ifstar{%
67   \def\HyC@star{*}%
68   \HyC@check
69 }{%
70   \let\HyC@star\@empty
71   \HyC@check
72 }%
73 }
```

\HyC@check The macro \HyC@check reads the definition command.

```
74 \def\HyC@check#1{%
75   \def\HyC@cmd{#1}%
76   \let\HyC@org@cmd\HyC@cmd
77   \let#1\relax
78   \let\HyC@param\@empty
79   \HyC@Toks{}%
80   \let\HyC@org@optcmd\HyC@noValue
81   \let\HyC@org@robustcmd\HyC@noValue
82   \let\HyC@org@robustoptcmd\HyC@noValue
83   \HyC@next
84 }
```

\HyC@noValue

```
85 \def\HyC@noValue{NoValue}
```

\HyC@newcommand The code for \newcommand.

```

86 \def\HyC@newcommand{%
87   \let\HyC@@cmd\HyC@cmd
88   \@ifnextchar[\HyC@nc@opt\HyC@nc@noopt
89 }

```

\HyC@Toks A register for storing the default value of an optional argument.

```

90 \newtoks\HyC@Toks

```

\HyC@nc@noopt This macro \HyC@nc@noopt is called, if the parser has reached the definition text.

```

91 \long\def\HyC@nc@noopt#1{%
92   \edef\x{%
93     \expandafter\noexpand\HyC@defcmd
94     \HyC@star
95     \expandafter\noexpand\HyC@cmd
96     \HyC@param\the\HyC@Toks
97   }%
98   \x{#1}%
99   \HyC@doCheck
100 }

```

\HyC@nc@opt This macro scans the first optional argument of a L^AT_EX definition (number of arguments).

```

101 \def\HyC@nc@opt[#1]{%
102   \def\HyC@param{[{#1}]}%
103   \@ifnextchar[\HyC@nc@default\HyC@nc@noopt
104 }

```

\HyC@nc@default Macro \HyC@nc@default scans the default for an optional argument.

```

105 \def\HyC@nc@default[#1]{%
106   \HyC@Toks={[{#1}]}%
107   \edef\HyC@optcmd{%
108     \expandafter\noexpand
109     \csname\expandafter\string\HyC@cmd\endcsname
110   }%
111   \expandafter\let\expandafter\HyC@org@optcmd\HyC@optcmd
112   \HyC@nc@noopt
113 }

```

\HyC@DeclareRobustCommand \DeclareRobustCommand{\cmd} makes the command \cmd robust, that then calls \cmd_ with an space at the end of the command name, defined by \newcommand. Therefore the further parsing is done by \HyC@nc@opt or \HyC@nc@noopt of the \HyC@newcommand chain.

```

114 \def\HyC@DeclareRobustCommand{%
115   \edef\HyC@robustcmd{%
116     \expandafter\noexpand
117     \csname\expandafter\expandafter\expandafter\expandafter\@gobble
118       \expandafter\string\HyC@cmd\space\endcsname
119   }%
120   \expandafter\let\expandafter\HyC@org@robustcmd\HyC@robustcmd
121   \expandafter\let\HyC@robustcmd\relax
122   \let\HyC@cmd\HyC@robustcmd
123   \@ifnextchar[\HyC@nc@opt\HyC@nc@noopt
124 }

```

\HyC@def The parameter text of \def or \edef is stored in the token register \HyC@Toks.

```

\HyC@edef 125 \def\HyC@def#1#{%
126   \HyC@Toks={#1}%
127   \HyC@nc@noopt
128 }
129 \let\HyC@edef\HyC@def

```

\HyC@doCheck This command performs the checks and prints the result.

```

130 \def\HyC@doCheck{%
131   \typeout{* Checking '\HyC@string\HyC@cmd':}%
132   \HyC@checkItem{cmd}%
133   \HyC@checkItem{robustcmd}%
134   \HyC@checkItem{optcmd}%
135   \HyC@checkItem{robustoptcmd}%
136   \endgroup
137 }

```

\HyC@checkItem A single check.

```

138 \def\HyC@checkItem#1{%
139   \expandafter\ifx\csname HyC@org@#1\endcsname\HyC@noValue
140   \else
141     \expandafter\expandafter\expandafter\ifx
142     \csname HyC@#1\expandafter\endcsname
143     \csname HyC@org@#1\endcsname
144     \expandafter\HyC@checkOk\csname HyC@#1\endcsname
145   \else
146     \expandafter\HyC@checkFailed
147     \csname HyC@#1\expandafter\endcsname
148     \csname HyC@org@#1\endcsname
149   \fi
150 \fi
151 }

```

\HyC@string Some shorthands.

```

\HyC@meaning 152 \def\HyC@string#1{\expandafter\string#1}
153 \def\HyC@meaning#1{\expandafter\meaning#1}

```

\HyC@checkOk The result, if the check succeeds.

```

154 \def\HyC@checkOk#1{%
155   \typeout{\space\space'\HyC@string#1' ok.}%
156 }

```

\HyC@checkFailed The result, if the check fails.

```

157 \def\HyC@checkFailed#1#2{%
158   \typeout{\space\space'\HyC@string#1' failed.}%
159   \typeout{\space\space* original: \meaning#2}%
160   \typeout{\space\space* expected: \HyC@meaning#1}%
161 }

162 % ****
163 </check>
164 (*package)

```

4 Package options and setup

4.1 Save catcodes

There are many packages that change the standard catcodes.

First we save the original meaning of ‘ and = in the token register \toks@, because we need the two characters in the macros \Hy@SetCatcodes and \Hy@RestoreCatcodes.

```
165 \begingroup
166   \@makeother`%
167   \@makeother\=%
168   \edef\x{%
169     \edef\noexpand\x{%
170       \endgroup
171       \noexpand\toks@{%
172         \catcode 96=\noexpand\the\catcode`\noexpand`\\relax
173         \catcode 61=\noexpand\the\catcode`\noexpand\=\\relax
174       }%
175     }%
176     \noexpand\x
177   }%
178 \x
179 \@makeother`%
180 \@makeother\=
```

\Hy@SetCatcodes

```
181 \def\Hy@SetCatcodes{%
182   \@makeother`%
183   \@makeother\=%
184   \catcode`\$=3 %
185   \catcode`\&=4 %
186   \catcode`\^=7 %
187   \catcode`\_=8 %
188   \@makeother\|=%
189   \@makeother\::%
190   \@makeother\(%
191   \@makeother\)%
192   \@makeother\[%
193   \@makeother\]%
194   \@makeother\/%
195   \@makeother\!%
196   \@makeother\<%
197   \@makeother\>%
198   \@makeother\.%
199   \@makeother\;%
200   \@makeother\+%
201   \@makeother\-%
202   \@makeother\%"%
203   \@makeother\%'%
204 }
```

\Hy@RestoreCatcodes

```
205 \begingroup
206   \def\x{\catcode`\noexpand#1=\the\catcode`\#1\relax}%
207   \xdef\Hy@RestoreCatcodes{%
208     \the\toks@
209     \x\$%
```

```

210  \x\&%
211  \x\^%
212  \x\_%
213  \x\|%
214  \x\:%
215  \x\(%
216  \x\)%
217  \x\[%
218  \x\]%
219  \x\/%
220  \x\!%
221  \x\<%
222  \x\>%
223  \x\.%
224  \x\;%
225  \x\+%
226  \x\-%
227  \x\%"%
228  \x\.'%
229  }%
230 \endgroup

231 \Hy@SetCatcodes

```

It needs the December 95 release of L^AT_EX, because it uses `\protected@write`, and it defines commands in options; and the page setup internal code changed at that point. It'll probably break with the later releases!

Use package `hobsub-hyperref` for faster package loading.

```

232 \IfFileExists{hobsub-hyperref.sty}{%
233   \RequirePackage{hobsub-hyperref}[2011/01/30]%
234 }{%

4.4 Compatibility with format dumps

\AfterBeginDocument For use with pre-compiled formats, created using the `ldump` package, there needs to be 2 hooks for adding material delayed until `\begin{document}`. These are called `\AfterBeginDocument` and `\AtBeginDocument`. If `lDump` is not loaded, then a single hook suffices for normal L^AT_EX processing.

The default definition of `\AfterBeginDocument` cannot be done by `\let` because of problems with `xypic`.

```
361 \@ifundefined{AfterBeginDocument}{%
362   \def\AfterBeginDocument{\AtBeginDocument}%
363 }{}}%
```

\Hy@AtBeginDocument For the case that package ‘hyperref’ is loaded using `\AtBeginDocument`, we have to wrap the calls of `\AtBeginDocument`/`\AfterBeginDocument` in `\AtEndOfPackage`. However, packages must be loaded in `\AtEndOfPackage` before package ‘kvoptions’ has to perform its option cleanup. Therefore we use a hook.

```
364 \def\Hy@AtBeginDocument{%
365   \ltx@LocalAppendToMacro\Hy@AtBeginDocumentHook
366 }
```

\Hy@AtEndOfPackage

```
367 \def\Hy@AtEndOfPackage{%
368   \ltx@LocalAppendToMacro\Hy@AtEndOfPackageHook
369 }
```

\Hy@AtBeginDocumentHook

```
370 \let\Hy@AtBeginDocumentHook\ltx@empty
```

\Hy@AtEndOfPackageHook

```
371 \let\Hy@AtEndOfPackageHook\ltx@empty
```

Install the hook, before package ‘kvoptions’ is loaded.

```
372 \AtEndOfPackage{%
373   \Hy@AtEndOfPackageHook
374   \let\Hy@AtEndOfPackageHook\@undefined
375   \AfterBeginDocument{%
376     \Hy@AtBeginDocumentHook{}%
377     \let\Hy@AtBeginDocumentHook\@undefined
378   }%
379 }
```

Package `kvoptions` is used for processing options that are given as key value pairs. The package provides `\ProcessKeyvalOptions`, formerly known as `\ProcessOptionsWithKV`.

```
380 \RequirePackage{kvoptions}[2009/07/21]
```

 \Hy@safe@activesfalse

```

479 \def\Hy@safe@activestrue{\csname @safe@activestrue\endcsname}
480 \def\Hy@safe@activesfalse{\csname @safe@activesfalse\endcsname}

```

5.3 Coordinate transformations

At some places numbers in pdf units are expected (eg: FitBH, ...). The following macros perform the transformation from TeX units (pt) to PDF units (bp).

\hypercalcbp The user macro \hypercalcbp can be used, for example, inside option values:

```
pdfstartview={FitBH \hypercalcbp{\paperheight-\topmargin-1in}}
```

- It cannot be used inside \usepackage, because LaTeX expands the options before package hyperref is loaded and \hypercalcbp is defined.
- With e-TeX extensions an expandable implementation is very easy; \hypercalcbp can be used everywhere and is expanded at use.
- Without e-TeX's features \hypercalcbp cannot be implemented expandable (practically) and have to be supported by \hypercalcbpdef. Limitations:
 - Works only in options that use \hypercalcbpdef (currently only pdfstartview).
 - For calculations package calc has to be loaded.
 - The expansion of the argument is done at definition time.

Example (TeX):

```
\usepackage{calc}
\usepackage{...}{hyperref}
\hypersetup{
    pdfstartview={FitBH \hypercalcbp{\paperheight-\topmargin-1in
        -\headheight-\headsep}}
}

```

6 Dealing with PDF strings

The PDF string stuff done by Heiko Oberdiek.

Naming convention: All internal commands that are only needed by `\pdfstringdef` are prefixed with `\HyPsd@`.

6.1 Description of PDF strings

The PDF specification defines several places to hold text strings (bookmark names, document information, text annotations, etc.). The PDF strings have following properties:

- They are surrounded by parentheses. The hexadecimal form is not supported.
- Like PostScript language strings they use the same escaping mechanism:
 - `\\"` the backslash itself
 - `\), \("` unbalanced parentheses
 - `\n, \r, \t, \b, \f` special white space escape sequences
 - `\ddd` octal character code `ddd`
- Strings are stored either in PDFDocEncoding, which is a superset of ISO-Latin1 and is compatible with Unicode with character codes below 256, or in Unicode.

6.2 Definition of `\pdfstringdef`

The central macro for dealing with PDF strings is `\pdfstringdef`. It defines a command `#1` to be the result of the conversion from the string in `#2` to a legal PDFDocEncoded string. Currently the definition is global, but this can be changed in the future.

Important: In `TEX`'s view PDF strings are written to a file and are expanded only in its mouth. Stomach commands that cannot be expanded further aren't executed, they are written verbatim. But the PDF reader that reads such a string isn't a `TEX` interpreter!

The macro `\pdfstringdef` consists of three main parts:

1. Preprocessing. Here the expansion is prepared. The encoding is set and many commands are redefined, so that they work appropriate.
2. Expansion. The `TEX` string is expanded the first time to get a PDF string.
3. Postprocessing. The result of the expansion is checked and converted to the final form.

```
\pdfstringdef \pdfstringdef works on the tokens in #2 and converts them to a PDF string as far as possible:
```

- The result should obey the rules of the PDF specification for strings.
- The string can safely processed by \TeX , because the tokens have only catcodes 10 until 12.

The result is stored in the command token given in #1.

```
522 \def\pdfstringdef#1#2{%
```

Many redefinitions are needed, so all the work is done in a group.

```
523 \begingroup
```

6.2.1 Preprocessing

Octal escape sequences. To avoid problems with eight bit or non printable characters, the octal escape notation is supported. So most glyphs in the encoding definitions for PD1 and PU produce these octal escape sequences. All three octal digits have to be used:

- Wrong results are avoided, if digits follow that are not part of the octal sequence.
- Macros rely on the fact that the octal sequences always consist of three digits (vtex driver, Unicode support).

The escape sequences start with a backslash. By \backslash string it will be printed. Therefore it is ensured that the \TeX escape character indeed prints as a normal backslash. Eventually this line can be removed, because this is standard L^AT_EX behaviour.

```
524 \escapechar'\\%
```

From the view of \TeX a octal sequence consists of the command tokens $\backslash 0$ until $\backslash 3$ and two digits. For saving tokens $\backslash 0$, $\backslash 1$, $\backslash 2$, and $\backslash 3$ are directly used without a preceding \backslash string in the glyph definitions. This is done here locally by defining the $\backslash 0$ until $\backslash 3$ commands. So the user can use octal escape sequences directly, the disadvantage is that a previous definition of this short commands does not apply.

```
525 \edef\0{\string\0}%
526 \edef\1{\string\1}%
527 \edef\2{\string\2}%
528 \edef\3{\string\3}%
```

Setting font encoding. The unicode encoding uses $\backslash 8$ and $\backslash 9$ as marker for the higher byte. $\backslash 8$ is an abbreviation for the higher bytes 0 until 7 that can be expressed by one digit. $\backslash 8$ will be converted to $\backslash 00$. However $\backslash 9$ only marks the next three digits as higher byte and will be removed later.

The encoding is set by \backslash enc@update for optimizing reasons.

```
529 \ifHy@unicode
530   \edef\8{\string\8}%
531   \edef\9{\string\9}%
532   \fontencoding{PU}%
533   \HyPsd@UTFviii
534   \def\ifpdfstringunicode##1##2##1{%
535     \else
536       \fontencoding{PD1}%
537   }
```

```

537     \def\ifpdfstringunicode##1##2{##2}%
538     \fi
539     \let\utf@viii@undeferr\HyPsd@utf@viii@undeferr
540     \enc@update

```

Internal encoding commands. `\pdfstringdef` interpretes text strings which are not allowed to contain mathematical stuff. The text glyph commands will produce a warning, if called in math mode. But this warning disturbs while expanding. Therefore we check for math mode here, before `\@inmathwarn` will be disabled (see below).

```
541     \@inmathwarn\pdfstringdef
```

If a glyph is used, that isn't in the PD1/PU encoding there will be an infinite error loop, because the NFSS encoding stuff have to be expanded unprotected (`\edef`), so that the assigments of `\@changed@cmd` don't take place. To patch this behaviour I only found `\@inmathwarn` as a usable hook. While an `\edef` a warning message by `\@inmathwarn` or `\TextSymbolUnavailable` cannot be give out, so `\@inmathwarn` should be disabled. And with the help of it the assignments in `\@changed@cmd` can easily be caught (see below).

```
542     \let\@inmathwarn\HyPsd@\inmathwarn
```

Unknown composite characters are built with `\add@accent`, so it is redefined to provide a warning.

```
543     \let\add@accent\HyPsd@\add@accent
```

Commands that don't use NFSS directly. There are several commands that prints characters in the printable ASCII area that don't obey the NFSS, so they have to be redefined here.

```

544     \let\{\textbraceleft
545     \let\}\textbraceright
546     \let\\textbackslash
547     \let\#\textnumbersign
548     \let\$textdollar
549     \let\%textpercent
550     \let\&textpersand
551 %    \let\~textasciitilde
552     \let\_textunderscore
553     \let\P{textparagraph}
554     \let\ldots{textellipsis}
555     \let\dots{textellipsis}

```

Newline `\newline` or `\%` do not work in bookmarks, in text annotations they should expand to `\r`. In pdf strings `\%` stands for a backslash. Therefore the commands are disabled now. The user can redefine them for a result what he want:

backslash: `\pdfstringdefDisableCommands{\let\\textbackslash}`

new line: `\pdfstringdefDisableCommands{\let\\textCR}`

disabled: `\pdfstringdefDisableCommands{\let\\empty}`

At any case, however, the optional argument or the star cannot be scanned in a 100% sure manner.

```

556     \def\\{\pdfstringdefWarn\\}%
557     \def\newline{\pdfstringdefWarn\newline}%

```

Logos. Because the box shifting used in the TeX logo does not work while writing to a file, the standard TeX logos are redefined.

```

657 \let\Hy@SectionAnchorHref\@gobble
```

Patch for cjk bookmarks.

```
658 \HyPsd@CJKhook
```

User hook. The switch \Hy@pdfstring is turned on. So user commands can detect that they are processed not to be typesetted within T_EX's stomach, but to be expanded by the mouth to give a PDF string. At this place before interpreting the string in #2 additional redefinitions can be added by the hook \pdfstringdefPreHook.

The position in the middle of the redefinitions is a compromise: The user should be able to provide his own (perhaps better) redefinitions, but some commands should have their original meaning, because they can be used in the hook (\bgroup, or \@protected@testopt, and \@ifnextchar for \renewcommand).

```
659 \Hy@pdfstringtrue  
660 \pdfstringdefPreHook
```

Spaces. For checking the token of the string, spaces must be masked, because they cannot be caught by undelimited arguments.

```
661  \HyPsd@LetUnexpandableSpace\space
662  \HyPsd@LetUnexpandableSpace\ %
663  \HyPsd@LetUnexpandableSpace~%
664  \HyPsd@LetUnexpandableSpace\nobreakspace
```

Package xspace.

```

669  }%
670  \let\/\HyPsd@ITALCORR
671  \let\bgroup\%
672  \let\egroup\%
```

Redefinitions of miscellaneous commands. Hyphenation does not make sense.

```
673  \let\discretionary@\gobbletwo
\@ifstar is defined in LATEX as follows:
```

```
\def\@ifstar#1{\@ifnextchar *{\@firstoftwo{#1}}}
```

\@ifnextchar doesn't work, because it uses stomach commands like \let and \futurelet. But it doesn't break. Whereas \@firstoftwo{#1} gives an error message because \@firstoftwo misses its second argument.

A mimicry of \@ifnextchar only with expandable commands would be very extensive and the result would be only an approximation. So here a cheaper solution follows in order to get rid of the error message at least:

```
674  \def\@ifnextchar{\HyPsd@ifnextchar@\@ifnextchar}%
675  \def\kernel@ifnextchar{\HyPsd@ifnextchar\kernel@ifnextchar}%
676  \def\new@ifnextchar{\HyPsd@ifnextchar\new@ifnextchar}%
677  \let\@protected@testopt\HyPsd@protected@testopt
```

Support for package ‘xargs’:

```
678  \let\@protected@testopt@xargs\HyPsd@protected@testopt
```

6.2.2 Expansion

There are several possibilities to expand tokens within L^AT_EX:

\protected@edef: The weakest form isn't usable, because it does not expand the font encoding commands. They are made robust and protect themselves.

\csname: First the string is expanded within a \csname and \endcsname. Then the command name is converted to characters with catcode 12 by \string and the first escape character removed by \gobble. This method has the great *advantage* that stomach tokens that aren't allowed in PDF strings are detected by T_EX and reported as errors in order to force the user to write correct things. So he gets no wrong results by forgetting the proofreading of his text. But the *disadvantage* is that old wrong code cannot be processed without errors. Mainly the error message is very cryptic and for the normal user hard to understand. T_EX provides no way to catch the error caused by \csname or allows to support the user with a descriptive error message.

Therefore the experienced user had to enable this behaviour by an option `exactdef` in previous versions less or equal 6.50.

`\edef` This version uses this standard form for expansion. It is stronger than L^AT_EX's `\protected@edef`. So the font encoding mechanism works and the glyph commands are converted to the correct tokens for PDF strings within the definitions of the PD1 encoding. Because the protecting mechanism of L^AT_EX doesn't work within an `\edef`, there are situations thinkable where code can break. For example, assignments and definitions aren't performed and so undefined command errors or argument parsing errors can occur. But this is only a compatibility problem with old texts. Now there are possibilities to write code that gives correct PDF strings (see `\texorpdfstring`). In the most cases unexpandable commands and tokens (math shift, grouping characters) remains. They don't cause an error like with `\csname`. However a PDF reader isn't T_EX, so these tokens are viewed verbatim. So this version detects them now, and removes them with an descriptive warning for the user. As additional features xspace support is possible and grouping characters can be used without problems, because they are removed silently.

Generic messages. While expanding via `\xdef` the `\Generic...` messages don't work and causes problems (error messages, invalid .out file). So they are disabled while expanding and removed silently, because a user warning would be too expensive (memory and runtime, `\pdfstringdef` is slow enough).

```
679  \begingroup
680  \let\GenericError\@gobblefour
681  \let\GenericWarning\@gobbletwo
682  \let\GenericInfo\@gobbletwo
```

Package french. This fix only works, if `\GenericError` is disabled.

```
683  \ifx\nofrenchguillemets\@undefined
684  \else
685  \nofrenchguillemets
686  \fi
```

Definition commands and expansion. Redefining the defining commands (see sec. 6.5.12). The original meaning of `\xdef` is saved in `\Hy@temp`.

```
687  \let\Hy@temp\xdef
688  \let\def\HyPsd@DefCommand
689  \let\gdef\HyPsd@DefCommand
690  \let\edef\HyPsd@DefCommand
691  \let\xdef\HyPsd@DefCommand
692  \let\futurelet\HyPsd@LetCommand
693  \let\let\HyPsd@LetCommand
694  \Hy@temp#1{#2}%
695  \endgroup
```

6.2.3 Postprocessing

If the string is empty time can be saved by omitting the postprocessing process.

```
696  \ifx#1\empty
697  \else
```

Protecting spaces and removing grouping characters. In order to check the tokens we must separate them. This will be done with \TeX 's argument parsing. With this method we must the following item takes into account, that makes makes things a little more complicate:

- \TeX does not accept a space as an undelimited argument, it cancels space tokens while looking for an undelimited argument. Therefore we must protect the spaces now.
- An argument can be a single token or a group of many tokens. And within curly braces tokens aren't find by \TeX 's argument scanning process. Third curly braces as grouping characters cannot be expanded further, so they don't vanish by the string expansion above. So these characters with catcode 1 and 2 are removed in the following and replaced by an marker for the xspace support.
- \TeX silently removes the outmost pair of braces of an argument. To prevent this on unwanted places, in the following the character $|$ is appended to the string to make an outer brace to an inner one.

First the top level spaces are protected by replacing. Then the string is scanned to detect token groups. Each token group will now be space protected and again scanned for another token groups.

```

698  \HyPsd@ProtectSpaces#1%
699  \let\HyPsd@String\@empty
700  \expandafter\HyPsd@RemoveBraces\expandafter{#1}%
701  \global\let#1\HyPsd@String

```

Check tokens. After removing the spaces and the grouping characters the string now should only consists of the following tokens/catcodes:

```

0  command names with start with an escape character.
3  math shift
4  alignment tabs
6  parameter, but this is unlikely.
7  superscript
8  subscript
11 letter
12 other
13 commands that are active characters.

```

After $\text{\HyPsd@CheckCatcodes}$ the command \HyPsd@RemoveMask is reused to remove the group protection character $|$. This character is needed to ensure that the string at least consists of one token if $\text{\HyPsd@CheckCatcodes}$ is called.

Because of internal local assignments and tabulars group braces are used.

```

702  \let\HyPsd@SPACEOPTI\relax
703  {%
704    \let\HyPsd@String\@empty
705    \expandafter\HyPsd@CheckCatcodes#1\HyPsd@End
706    \global\let#1\HyPsd@String
707  }%
708  \expandafter\HyPsd@RemoveMask\expandafter
709    |\expandafter\@empty#1\HyPsd@End#1%

```

$\text{\HyPsd@CheckCatcodes}$ should no have removed the tokens with catcode 3, 4, 7, and 8. Because a parameter token (6) would cause to many errors before, there

should now be only tokens with catcodes 11 or 12. So I think there is no need for a safety step like:

```
\xdef#1{\expandafter\strip@prefix\meaning#1}%
```

Looking for wrong glyphs. The case that glyphs aren't defined in the PD1 encoding is caught above in such a way, that the glyph name and a marker is inserted into the string. Now we can safely scan the string for this marker and provide a descriptive warning.

```
710  \expandafter\HyPsd@Subst\expandafter{\HyPsd@GLYPHERR}{\relax}#1%
711  \let\HyPsd@String\empty
712  \expandafter\HyPsd@GlyphProcess#1\relax\empty
713  \global\let#1\HyPsd@String
```

Backslash. The double backslash disturbs parsing octal sequenzes, for example in an string like abc\\051 the sequence \\051 is detected although the second \\ belongs to the first backslash.

```
714  \HyPsd@StringSubst{\\"}{\textbackslash}#1%
```

Spaces. All spaces have already the form \\040. The last postprocessing step will be an optimizing of the spaces, so we already introduce already the necessary command \HyPsd@SPACEOPTI. But first it is defined to be \relax in order to prevent a too early expansion by an \edef. Secondly a \relax serves as a marker for a token that is detected by \xspace.

The code of frenchb.lfd can produce an additional space before \guillemotright, because \lastskip and \unskip do not work. Therefore it is removed here.

```
715  \ifHy@unicode
716  \expandafter\HyPsd@StringSubst\csname 80\040\endcsname
717  \HyPsd@SPACEOPTI#1%
718  \edef\Hy@temp@a{\HyPsd@SPACEOPTI\HyPsd@SPACEOPTI\80\273}%
719  \expandafter\HyPsd@Subst\expandafter{\Hy@temp@a}%
720  {\HyPsd@SPACEOPTI\80\273}#1%
721  \else
722  \HyPsd@StringSubst{\040}\HyPsd@SPACEOPTI#1%
723  \expandafter\HyPsd@Subst\expandafter{%
724  \expandafter\HyPsd@SPACEOPTI\expandafter\HyPsd@SPACEOPTI
725  \string\273}{\HyPsd@SPACEOPTI\273}#1%
726  \fi
```

Right parenthesis. Also \xspace detects a right parenthesis. For the \xspace support and the following parenthesis check the different parenthesis notations), \), and \\051 are converted to one type \) and before \HyPsd@empty with the meaning of \relax is introduced for \xspace. By redefining to \empty \HyPsd@empty can easily removed later.

```
727  \ifHy@unicode
728  \HyPsd@StringSubst{\)}{\80\051}#1%
729  \HyPsd@Subst{\80\051}#1%
730  \let\HyPsd@empty\relax
731  \expandafter\HyPsd@StringSubst\csname 80\051\endcsname
732  {\HyPsd@empty\80\051}#1%
733  \else
734  \HyPsd@StringSubst{\)}{\051}#1%
735  \HyPsd@Subst{\051}#1%
```

```

736      \let\HyPsd@empty\relax
737      \HyPsd@StringSubst{\051}{\HyPsd@empty\string\)}#1%
738      \fi

```

Support for package `xspace`. `\xspace` looks for the next token and decides if it expands to a space or not. Following tokens prevent its transformation to a space: Beginning and end of group, handled above by replacing by an italic correction, several punctuation marks, a closing parentheses, and several spaces.

Without package `xspace` there are tokens with catcode 11 and 12, `\HyPsd@empty` and `\HyPsd@SPACEOPTI`. With package `xspace` marker for the italic correction `\V` and `\xspace` come with. In the package `xspace` case the two markers are replaced by commands and an `\edef` performs the `\xspace` processing.

In the opposite of the original `\xspace` `\HyPsd@xspace` uses an argument instead of a `\futurelet`, so we have to provide such an argument, if `\HyPsd@xspace` comes last. Because `\HyPsd@Subst` with several equal tokens (--) needs a safe last token, in both cases the string gets an additional `\HyPsd@empty`.

```

739      \expandafter\HyPsd@Subst\expandafter{/\}\HyPsd@empty#1%
740      \ltx@IfUndefined{@xspace}{%
741      }{%
742      \let\HyPsd@xspace\relax
743      \expandafter\HyPsd@Subst\expandafter
744      {\HyPsd@XSPACE}\HyPsd@xspace#1%
745      \let\HyPsd@xspace\HyPsd@doxspace
746      }%
747      \xdef#1{\HyPsd@empty}%

```

Ligatures. `TeX` forms ligatures in its stomach, but the PDF strings are treated only by `TeX`'s mouth. The PDFDocEncoding contains some ligatures, but the current version 3 of the AcrobatReader lacks the `fi` and `fl` glyphs, and the Linux version lacks the `emdash` and `endash` glyphs. So the necessary code is provided here, but currently disabled, hoping that version 4 of the AcrobatReader is better. To break the ligatures the user can use an empty group, because it leads to an insertion of an `\HyPsd@empty`. If this ligature code will be enabled some day, then the italic correction should also break the ligatures. Currently this occurs only, if package `xspace` is loaded.

Since newer AcrobatReader versions now show the en- and emdash in a correct way (AR7/Linux, AR8/Linux), the substitution code for them is enabled starting with version 6.781.

```

748      \HyPsd@Subst{--}\textemdash#1%
749      \HyPsd@Subst{--}\textendash#1%
750 %      \HyPsd@Subst{fi}\textfi#1%
751 %      \HyPsd@Subst{fl}\textfl#1%
752      \HyPsd@Subst{!'}\textexclamdown#1%
753      \HyPsd@Subst{?'}\textquestiondown#1%

```

With the next `\edef` we get rid of the token `\HyPsd@empty`.

```
754      \let\HyPsd@empty\@empty
```

Left parentheses. Left parentheses are now converted to safe forms to avoid problems with unmatched ones (`\(`` with PDFDocEncoding, the octal sequence with Unicode).

An optimization is possible. Matched parentheses can be replaced by a `()` pair. But this code is removed to save `TeX` memory and time.

```
755      \ifHy@unicode
```

```

756     \HyPsd@StringSubst{(\textparenleft\#1%
757     \HyPsd@Subst{(\textparenleft\#1%
758 \else
759     \HyPsd@StringSubst{(\050}\#1%
760     \HyPsd@Subst{(\050}\#1%
761     \HyPsd@StringSubst{\050}{\string\()\#1%
762 \fi

```

Optimizing spaces. Spaces are often used, but they have a very long form \040. They are converted back to real spaces, but not all, so that no space follows after another. In the bookmark case several spaces are written to the .out file, but if the entries are read back, several spaces are merged to a single one.

With Unicode the spaces are replaced by their octal sequences.

```

763 \ifHy@unicode
764   \edef\HyPsd@SPACEOPTI{\80\040}%
765 \else
766   \let\HyPsd@SPACEOPTI\HyPsd@spaceopti
767 \fi
768 \xdef#1{\#1\@empty}%
769 \fi

```

Converting to Unicode. At last the eight bit letters have to be converted to Unicode, the masks \8 and \9 are removed and the Unicode marker is added.

```

770 \endgroup

6.3.3 PD1 encoding

The PD1 encoding implements the PDFDocEncoding for use with L^AT_EX 2_ε's NFSS. Because the informational strings are not set by T_EX's typesetting mechanism but for interpreting by the PDF reader, the glyphs of the PD1 encoding are implemented to be safely written to a file (PDF output file, .out file).

The PD1 encoding can be specified as an option of the 'fontenc' package or loaded here. It does not matter what font family is selected, as T_EX does not process it anyway. So use CM.

```
901 \@ifundefined{T@PD1}{%
902   \input{pd1enc.def}%
903   \HyLinguex@Restore
904 }{}%
905 \DeclareFontFamily{PD1}{pdf}{}%
906 \DeclareFontShape{PD1}{pdf}{m}{n}{\relax cmr10}%
907 \DeclareFontSubstitution{PD1}{pdf}{m}{n}
```

6.3.4 PU encoding

The PU encoding implements the Unicode encoding for use with L^AT_EX's NFSS. Because of large memory requirements the encoding file for Unicode support is only loaded, if option `unicode` is specified as package option.

\HyPsd@InitUnicode Because the file puenc.def takes a lot of memory, the loading is defined in the macro \HyPsd@InitUnicode called by the package option `unicode`.

```
908 \def\HyPsd@InitUnicode{%
909   \@ifundefined{T@PU}{%
910     \input{puenc.def}%
911     \HyLinguex@Restore
912   }{}%
913   \DeclareFontFamily{PU}{pdf}{}%
914   \DeclareFontShape{PU}{pdf}{m}{n}{\relax cmr10}%
915   \DeclareFontSubstitution{PU}{pdf}{m}{n}%
916   \let\HyPsd@InitUnicode\relax
917 }
```

6.4 Additional user commands

6.4.1 \texorpdfstring

\texorpdfstring While expanding the string in \pdfstringdef the switch \ifHy@pdfstring is set. This is used by the full expandible macro \texorpdfstring. It expects two arguments, the first contains the string that will be set and processed by T_EX's stomach, the second contains the replacement for PDF strings.

```
918 \def\texorpdfstring{%
919   \ifHy@pdfstring
920     \expandafter\@secondoftwo
921   \else
922     \expandafter\@firstoftwo
923   \fi
924 }
```

6.4.2 Hooks for \pdfstringdef

\pdfstringdefPreHook Default definition of the hooks for \pdfstringdef. The construct \@ifundefined with \let is a little bit faster than \providecommand.

```

925 \@ifundefined{pdfstringdefPreHook}{%
926   \let\pdfstringdefPreHook\empty
927 }{%
928 \@ifundefined{pdfstringdefPostHook}{%
929   \let\pdfstringdefPostHook\@gobble
930 }{%

```

\pdfstringdefDisableCommands In \pdfstringdefPreHook the user can add code that is executed before the string, that have to be converted by \pdfstringdef, is expanded. So replacements for problematic macros can be given. The code in \pdfstringdefPreHook should not be replaced perhaps by an \renewcommand, because a previous meaning gets lost.

Macro \pdfstringdefDisableCommands avoids this, because it reuses the old meaning of the hook and appends the new code to \pdfstringdefPreHook, e.g.:

```

\pdfstringdefDisableCommands{%
  \let~\textasciitilde
  \def\url{\pdfstringdefWarn\url}%
  \let\textcolor\@gobble
}%

```

In the argument of \pdfstringdefDisableCommands the character @ can be used in command names. So it is easy to use useful L^AT_EX commands like \@gobble or \@firstofone.

```

931 \def\pdfstringdefDisableCommands{%
932   \begingroup
933   \makeatletter
934   \HyPsd@DisableCommands
935 }%

```

\HyPsd@DisableCommands

```

936 \long\def\HyPsd@DisableCommands#1{%
937   \ltx@GlobalAppendToMacro\pdfstringdefPreHook{#1}%
938   \endgroup
939 }%

```

\pdfstringdefWarn The purpose of \pdfstringdefWarn is to produce a warning message, so the user can see, that something can go wrong with the conversion to PDF strings.

The prefix \<>- is added to the token. \noexpand protects the probably undefined one during the first expansion step. Then \HyPsd@CheckCatcodes can detect the not allowed token, \HyPsd@CatcodeWarning prints a warning message, after \HyPsd@RemovePrefix has removed the prefix.

\pdfstringdefWarn is intended for document authors or package writers, examples for use can be seen in the definition of \HyPsd@ifnextchar or \HyPsd@protected@testopt.

```

940 \def\pdfstringdefWarn#1{%
941   \expandafter\noexpand\csname\<>-\string#1\endcsname
942 }%

```

6.5 Help macros for expansion

6.5.1 \ignorespaces

\HyPsd@ignorespaces With the help of a trick using \romannumeral the effect of \ignorespaces can be simulated a little, In a special case using an alphabetic constant \romannumeral eats an optional space. If the constant is zero, then the \romannumeral expression

vanishes. The following macro uses this trick twice, thus `\HyPsd@ignorespaces` eats up to two following spaces.

```

943 \begingroup
944   \catcode0=12 %
945   \def\x{\endgroup
946   \def\HyPsd@ignorespaces{%
947     \romannumeral\expandafter`\expandafter^^@\%
948     \romannumeral`^^@\%
949   }%
950 }%
951 \x

```

6.5.2 Babel languages

Since version 2008/03/16 v3.8j babel uses inside `\AtBeginDocument`:

```

\pdfstringdefDisableCommands{%
  \languageshorthands{system}%
}

```

As consequence the shorthands are shown in the bookmarks, not its result. Therefore `\languageshorthands` is disabled before the user hook. If there is a need to use the command, then `\HyOrg@languageshorthands` can be used inside `\pdfstringdefDisableCommands`.

```

6.5.4 CJK bookmarks

\HyPsd@CJKhook Some internal commands of package cjk are redefined to avoid error messages. For a rudimentary support of CJK bookmarks the active characters are redefined so that they print themselves.

After preprocessing of Big5 encoded data the following string for a double-byte character is emitted:

^^7f<arg1>^^7f<arg2>^^7f

<arg1> is the first byte in the range (always > 0x80); <arg2> is the second byte in decimal notation ($\geq 0x40$).

```

6.5.6 \inmathwarn-Patch

\HyPsd@inmathwarn The patch of \inmathwarn is needed to get rid of the infinite error loop with glyphs of other encodings (see the explanation above). Potentially the patch is dangerous, if the code in *ltoutenc.dtx* changes. Checked with L^AT_EX 2 _{ε} versions [1998/06/01] and [1998/12/01]. I expect that versions below [1995/12/01] don't work.

To understand the patch easier, the original code of `\@current@cmd` and `\@changed@cmd` follows (L^AT_EX 2 _{ε} release [1998/12/01]). In the normal case `\pdfstringdef` is executed in a context where `\protect` has the meaning of `\@typeset-protect` ($=\relax$).

```

\def\@current@cmd#1{%
  \ifx\protect\@typeset@protect
    \@inmathwarn#1%
  \else
    \noexpand#1\expandafter\@gobble
  \fi}
\def\@changed@cmd#1#2{%
  \ifx\protect\@typeset@protect
    \@inmathwarn#1%
    \expandafter\ifx\csname\cf@encoding\string#1\endcsname\relax

6.5.7 Unexpandable spaces

\HyPsd@LetUnexpandableSpace In \HyPsd@@ProtectSpaces the space tokens are replaced by not expandable commands, that work like spaces:

- So they can caught by undelimited arguments.
- And they work in number, dimen, and skip assignments.

These properties are used in \HyPsd@CheckCatcodes.

```
1587 \def\HyPsd@LetUnexpandableSpace#1{%
1588  \expandafter\futurelet\expandafter#\1\expandafter\@gobble\space\relax
1589 }
```

\HyPsd@UnexpandableSpace \HyPsd@UnexpandableSpace is used in \HyPsd@@ProtectSpaces. In \yPsd@@ProtectSpaces the space tokens are replaced by unexpandable commands \HyPsd@UnexpandableSpace, but that have the effect of spaces.

```
1590 \HyPsd@LetUnexpandableSpace\HyPsd@UnexpandableSpace
```

6.5.8 Marker for commands

\HyPsd@XSPACE \HyPsd@ITALCORR \HyPsd@GLYPHERR Some commands and informations cannot be utilized before the string expansion and the checking process. Command names are filtered out, so we need another way to transport the information: An unusual **#** with catcode 12 marks the beginning of the extra information.

```
1591 \edef\HyPsd@XSPACE{\string#\string X}
1592 \edef\HyPsd@ITALCORR{\string#\string I}
1593 \edef\HyPsd@GLYPHERR{\string#\string G}
```

6.5.9 \hskip fix

\HyPsd@hskip
1594 \def\HyPsd@hskip#1{\HyPsd@@hskip#1*\END}

\HyPsd@@hskip \HyPsd@@hskip checks whether \hskip is called in its star form.
1595 \def\HyPsd@@hskip#1#2\END{%
1596 \ifx\\#2\\%

6.5.12 Redefining the defining commands

Definitions aren't allowed, because they aren't executed in an only expanding context. So the command to be defined isn't defined and can perhaps be undefined. This would cause TeX to stop with an error message. With a deep trick it is possible to define commands in such a context: `\csname` does the job, it defines the command to be `\relax`, if it has no meaning.

Active characters cannot be defined with this trick. It is possible to define all undefined active characters (perhaps that they have the meaning of `\relax`). To avoid side effects this should be done in `\pdfstringdef` shortly before the `\xdef` job. But checking and defining all possible active characters of the full range (0 until 255) would take a while. `\pdfstringdef` is slow enough, so this isn't done.

`\HyPsd@DefCommand` and `\HyPsd@LetCommand` expands to the commands `\<def>-command` and `\<let>-command` with the meaning of `\def` and `\let`. So it is detected by `\HyPsd@CheckCatcodes` and the command name `\<def>-command` or `\<let>-command` should indicate a forbidden definition command.

The command to be defined is converted to a string and back to a command name with the help of `\csname`. If the command is already defined, `\noexpand` prevents a further expansion, even though the command would expand to legal stuff. If the command doesn't have the meaning of `\relax`, `\HyPsd@CheckCatcodes` will produce a warning. (The command itself can be legal, but the warning is legitimate because of the position after a defining command.)

The difference between `\HyPsd@DefCommand` and `\HyPsd@LetCommand` is that the first one also cancels this arguments, the parameter and definition text.

The right side of the `\let` commands cannot be canceled with an undelimited parameter because of a possible space token after `\futurelet`.

To avoid unmacheted `\if...` tokens, the cases `\let\if... \iftrue` and `\let\if... \iffalse` are checked and ignored.

```

1743 }
```

6.5.13 `\ifnextchar`

`\HyPsd@ifnextchar` In `\pdfstringdef @ifnextchar` is disabled via a `\let` command to save time. First a warning message is given, then the three arguments are canceled. `\@ifnextchar` cannot work in a correct manner, because it uses `\futurelet`, but this is a stomach feature, that doesn't work in an expanding context. There are several variants of `\@ifnextchar`:

- `\@ifnextchar`
- `\kernel@ifnextchar`
- `\new@ifnextchar` from package `amsen.sty` (bug report `latex/3662`).

```

1744 \def\HyPsd@ifnextchar#1{%
1745   \pdfstringdefWarn#1%
1746   \expandafter\@gobbletwo\@gobble
1747 }

```

6.5.14 \@protected@testopt@ifnextchar

- \HyPsd@protected@testopt Macros with optional arguments doesn't work properly, because they call \@ifnextchar to detect the optional argument (see the explanation of \HyPsd@ifnextchar). But a warning, that \@ifnextchar doesn't work, doesn't help the user very much. Therefore \@protected@testopt is also disabled, because its first argument is the problematic macro with the optional argument and it is called before \@ifnextchar.

```

1748 \def\HyPsd@protected@testopt#1{%
1749   \pdfstringdefWarn#1%
1750   \@gobbletwo
1751 }

```

6.6 Help macros for postprocessing

6.6.1 Generic warning.

- \HyPsd@Warning For several reasons \space is masked and does not have its normal meaning. But it is used in warning messages, so it is redefined locally:

```

1752 \def\HyPsd@Warning#1{%
1753   \begingroup
1754   \let\space\ltx@space
1755   \Hy@Warning{#1}%
1756   \endgroup
1757 }

```

6.6.2 Protecting spaces

```

1758 \RequirePackage{etexcmds}[2007/09/09]
1759 \ifetex@unexpanded
1760   \expandafter\@secondoftwo
1761 \else
1762   \expandafter\@firstoftwo
1763 \fi
1764 {%

```

- \HyPsd@ProtectSpaces \HyPsd@ProtectSpaces calls with the expanded string \HyPsd@@ProtectSpacesFi. The expanded string is protected by | at the beginning and end of the expanded string. Because of this there can be no group at the beginning or end of the string and grouping characters are not removed by the call of \HyPsd@ProtectSpacesFi.

```

1765 \def\HyPsd@ProtectSpaces#1{%
1766   \iftrue
1767   \expandafter\HyPsd@@ProtectSpacesFi
1768   \expandafter|\expandafter\@empty#1| \HyPsd@End#1%
1769   \fi
1770 }%

```

- \HyPsd@@ProtectSpacesFi The string can contain command tokens, so it is better to use an \def instead of an \edef.

```

1771 \def\HyPsd@@ProtectSpacesFi#1 #2\HyPsd@End#3\fi{%

```

```

1772   \fi
1773   \ifx\scrollmode#2\scrollmode
1774     \HyPsd@RemoveMask#1\HyPsd@End#3%
1775   \else
1776     \gdef##3{#1\HyPsd@UnexpandableSpace#2}%
1777     \expandafter\HyPsd@@ProtectSpacesFi#3\HyPsd@End#3%
1778   \fi
1779 }%

```

Remove mask.

\HyPsd@RemoveMask removes the protecting |. It is used by \HyPsd@@ProtectSpacesFi and by the code in \pdfstringdef that removes the grouping characters.

```

1780 \def\HyPsd@RemoveMask|#1|\HyPsd@End#2{%
1781   \toks@\expandafter{\#1}%
1782   \xdef#2{\the\toks@}%
1783 }%
1784 }{%
1785   \let\HyPsd@fi\fi
1786   \def\HyPsd@ProtectSpaces#1{%
1787     \xdef#1{%
1788       \iftrue
1789         \expandafter\HyPsd@@ProtectSpacesFi
1790         \expandafter|\expandafter\@empty#1| %
1791       \HyPsd@fi
1792     }%
1793     \expandafter\HyPsd@RemoveMask#1\HyPsd@End#1%
1794   }%
1795   \def\HyPsd@@ProtectSpacesFi#1 #2\HyPsd@fi{%
1796     \fi
1797     \etex@unexpanded{\#1}%
1798     \ifx\scrollmode#2\scrollmode
1799     \else
1800       \HyPsd@@ProtectSpacesFi\HyPsd@UnexpandableSpace#2%
1801     \HyPsd@fi
1802   }%
1803   \def\HyPsd@RemoveMask|#1|\HyPsd@End#2{%
1804     \xdef#2{\etex@unexpanded\expandafter{\#1}}%
1805   }%
1806 }

```

6.6.3 Remove grouping braces

\HyPsd@RemoveBraces #1 contains the expanded string, the result will be locally written in command \HyPsd@String.

```

1807 \def\HyPsd@RemoveBraces#1{%
1808   \ifx\scrollmode#1\scrollmode
1809   \else
1810     \HyPsd@@RemoveBracesFi#1\HyPsd@End{\#1}%
1811   \fi
1812 }

```

\HyPsd@@RemoveBraces \HyPsd@@RemoveBraces is called with the expanded string, the end marked by \HyPsd@End, the expanded string again, but enclosed in braces and the string command. The first expanded string is scanned by the parameter text #1#2. By

a comparison with the original form in #3 we can decide whether #1 is a single token or a group. To avoid the case that #2 is a group, the string is extended by a | before.

While removing the grouping braces an italic correction marker is inserted for supporting package `xspace` and letting ligatures broken.

Because the string is already expanded, the \if commands should disappeared. So we can move some parts out of the argument of \ltx@ReturnAfterFi.

```

1813 \def\HyPsd@@RemoveBracesFi#1#2\HyPsd@End#3\fi{%
1814   \fi

6.6.4 Catcode check

Check catcodes.

\HyPsd@CheckCatcodes Because \ifcat expands its arguments, this is prevented by \noexpand. In case of command tokens and active characters \ifcat now sees a \relax. After protecting spaces and removing braces #1 should be a single token, no group of several

tokens, nor an empty group. (So the `\expandafter\relax` between `\ifcat` and `\noexpand` is only for safety and it should be possible to remove it.)

`\protect` and `\relax` should be removed silently. But it is too dangerous and breaks some code giving them the meaning of `\empty`. So commands with the meaning of `\protect` are removed here. (`\protect` should have the meaning of `\@typeset@protect` that is equal to `\relax`).

```

1851 \def\HyPsd@CheckCatcodes#1#2\HyPsd@End{%

6.6.9 Support for UTF-8 input encoding

After `\usepackage[utf8]{inputenc}` there are macros that expect the UTF-8 octets as arguments. Therefore we can calculate the PDF octal sequences directly. Because the PDF format is limited to UCS-2, conversion macros are needed for UTF-8 sequences with two and three octets only.

This calculation must be done in an expandable context, so we use eTeXhere for performance reasons. Unhappily the results of divisions are rounded. Thus a circumvention via `\dimexpr` is used, e.g.:

```

\numexpr 123/4\relax is replaced by
\number\dimexpr.25\dimexpr 123sp\relax\relax

2206 \begingroup\expandafter\expandafter\expandafter\endgroup
2207 \expandafter\ifx\csname numexpr\endcsname\relax

8 Help macros for links

Anchors get created on the baseline of where they occur. If an XYZ PDF view is set, this means that the link places the top of the screen *on the baseline* of the target. If this is an equation, for instance, it means that you cannot see anything. Some links, of course, are created at the start of environments, and so it works. To allow for this, anchors are raised, where possible, by some small amount. This defaults to `\baselineskip`, but users can set it to something else in two ways (thanks to Heiko Oberdiek for suggesting this):

1. Redefine `\HyperRaiseLinkDefault` to be eg the height of a `\strut`
2. Redefine `\HyperRaiseLinkHook` to do something complicated; it must give a value to `\HyperRaiseLinkLength`, which is what actually gets used

```
2410 \let\HyperRaiseLinkHook\@empty
2411 \def\HyperRaiseLinkDefault{\baselineskip}
```

`\HyperRaiseLinkHook` allows the user to reassign `\HyperRaiseLinkLength`.

```

Next commented section for Russian is provided by Olga Lapko.

Next follow the checked reference names with commented variants and explanations. All they are abbreviated and they won't create a grammatical problems in the *middle* of sentences.

The most weak points in these abbreviations are the `\equationautorefname`, `\theoremautorefname` and the `\FancyVerbLineautorefname`. But those three, and also the `\footnoteautorefname` are not *too* often referenced. Another rather weak point is the `\appendixautorefname`.

```
3202 \def\HyLang@russian{%
```

The abbreviated reference to the equation: it is not for "the good face of the book", but maybe it will be better to get the company for the `\theoremautorefname`?

```
3203 \def\equationautorefname{\cyr\cyrv\cyrery\cyrr.}%
```

The name of the equation reference has common form for both nominative and accusative but changes in other forms, like "of `\autoref{auto}`" etc. The full name must follow full name of the `\theoremautorefname`.

```
3204 % \def\equationautorefname{%
3205 %   \cyr\cyrv\cyrery\cyrr\cyra\cyrzh\cyre\cyrn\cyri\cyre
3206 % }%
```

The variant of footnote has abbreviation form of the synonym of the word "footnote". This variant of abbreviated synonym has alternative status (maybe obsolete?).

```
3207 \def\footnoteautorefname{%
3208   \cyr\cyrp\cyro\cyrd\crys\cyrt\cyrr.\ \cyrp\cyrr\cyri\cymr.%
3209 }%
```

Commented form of the full synonym for "footnote". It has common form for both nominative and accusative but changes in other forms, like "of `\autoref{auto}`"

```
3210 % \def\footnoteautorefname{%
3211 %   \cyr\cyrp\cyro\cyrd\crys\cyrt\cyrr\cyro\cyrch\cyrn\cyro\cyre\ %
3212 %   \cyrp\cyrr\cyri\cymr\cyre\cyrch\cyra\cyrn\cyri\cyre
3213 % }%
```

Commented forms of the "footnote": have different forms, the same is for the nominative and accusative. (The others needed?)

```
3214 % \def\Nomfootnoteautorefname{\cyr\crys\cyrn\cyro\crys\cyrk\cyra}%
3215 % \def\Accfootnoteautorefname{\cyr\crys\cyrn\cyro\crys\cyrk\cyrn}%
```

Name of the list item, can be confused with the paragraph reference name, but reader could understand meaning from context(?). Commented variant has common form for both nominative and accusative but changes in other forms, like "of `\autoref{auto}`" etc.

```
3216 \def\itemautorefname{\cyr\cyrp.}%
3217 % \def\itemautorefname{\cyr\cyrp\cyru\cyrn\cyrk\cyrt}%
```

Names of the figure and table have stable (standard) abbreviation forms. No problem in the middle of sentence.

```
3218 \def\figureautorefname{\cyr\cyrr\cyri\crys.}%
3219 \def\tableautorefname{\cyr\cyrt\cyra\cyrb\cyrl.}%
```

Names of the part, chapter, section(s) have stable (standard) abbreviation forms. No problem in the middle of sentence.

```
3220 \def\partautorefname{\cyr\cyrch.}%
3221 \def\chapterautorefname{\cyr\cyrg\cyrl.}%
3222 \def\sectionautorefname{\cyr\cyrr\cyra\cyrz\cyrd.}%
```

Name of the appendix can use this abbreviation, but it is not standard for books, i.e, not for “the good face of the book”. Commented variant has common form for both nominative and accusative but changes in other forms, like “of \autoref{auto}” etc.

```
3223 \def\appendixautorefname{\cyr\cyrp\cyrr\cyri\cyrl.}%
3224 % \def\appendixautorefname{%
3225 %   \cyr\cyrp\cyrr\cyri\cyrl\cyro\cyrzh\cyre\cyrn\cyri\cyre
3226 % }%
```

The sectioning command have stable (almost standard) and common abbreviation form for all levels (the meaning of these references visible from the section number). No problem.

```
3227 \def\subsectionautorefname{\cyr\cyrr\cyra\cyrz\cyrd.}%
3228 \def\subsubsectionautorefname{\cyr\cyrr\cyra\cyrz\cyrd.}%
```

The names of references to paragraphs also have stable (almost standard) and common abbreviation form for all levels (the meaning of these references is visible from the section number). No problem in the middle of sentence.

```
3229 \def\paragraphautorefname{\cyr\cyrp.}%
3230 \def\subparagraphautorefname{\cyr\cyrp.}%
```

Commented variant can be used in books but since it has common form for both nominative and accusative but it changes in other forms, like “of \autoref{auto}” etc.

```
3231 % \def\paragraphautorefname{\cyr\cyrp\cyru\cyrn\cyrk\cyrt}%
3232 % \def\subparagraphautorefname{\cyr\cyrp\cyru\cyrn\cyrk\cyrt}%
```

The name of verbatim line. Here could be a standard of the abbreviation (used very rare). But the author preprint publications (which have not any editor or corrector) can use this abbreviation for the page reference. So the meaning of the line reference can be read as reference to the page.

```
3233 \def\FancyVerbLineautorefname{\cyr\cyrs\cyrt\cyrr.}%
```

Commented names of the “verbatim line”: have different forms, also the nominative and accusative.

```
3234 % \def\NomFancyVerbLineautorefname{\cyr\cyrs\cyrt\cyrr\cyro\cyrk\cyra}%
3235 % \def\AccFancyVerbLineautorefname{\cyr\cyrs\cyrt\cyrr\cyro\cyrk\cyru}%
```

The alternative, ve-e-e-ery professional abbreviation, was used in typography markup for typesetters.

```
3236 % \def\FancyVerbLineautorefname{\cyr\cyrs\cyrt\cyrr\cyrk.}%
```

The names of theorem: if we want have “the good face of the book”, so the theorem reference must have the full name (like equation reference). But ...

```
3237 \def\theoremautorefname{\cyr\cyrt\cyre\cyro\cyrr.}%
```

Commented forms of the “theorem”: have different forms, also the nominative and accusative.

```

```

The depth of the outlines is controlled by option `bookmarksdepth`. The option acts globally and distinguishes three cases:

- `bookmarksdepth`: Without value hyperref uses counter `tocdepth` (compatible behaviour and default).
- `bookmarksdepth=<number>`: the depth is set to `<number>`.
- `bookmarksdepth=<name>`: The `<name>` must not start with a number or minus sign. It is a document division name (part, chapter, section, ...). Internally the value of macro `\toclevel@<name>` is used.

```

The value of the `bordercolor` options are not processed by the color package. Therefore the value consists of space separated rgb numbers in the range 0 until 1.

Package `xcolor` provides `\XC@bordercolor` since version 1.1. If the two spaces in the color specification are missing, then the value is processed as color specification from package `xcolor` by using `\XC@bordercolor` (since `xcolor` 2004/05/09)

v1.11, versions 2005/03/24 v2.02 until 2006/11/28 v2.10 do not work because of a bug that is fixed in 2007/01/21 v2.11).

16 User hypertext macros

We need to normalise all user commands taking a URL argument; Within the argument the following special definitions apply: \#, \%, ~ produce #, %, ~ respectively. for consistency \~ produces ~ as well. At the *top level only* ie not within the argument of another command, you can use # and % unescaped, to produce themselves. even if, say, # is entered as # it will be converted to \# so it does not die if written to an aux file etc. \# will write as # locally while making \specials.

\hyperref is more complicated, as it includes the concept of a category of link, used to make the name. This is not really used in this package. \hyperdef sets

up an anchor in the same way. They each have three parameters of category, linkname, and marked text, and \hyperref also has a first parameter of URL. If there is an optional first parameter to \hyperdef, it is the name of a L^AT_EX label which can be used in a short form of \hyperref later, to avoid remembering the name and category.

17 Underlying basic hypertext macros

Links have an optional type, a filename (possibly a URL), an internal name, and some marked text. (Caution: the internal name may contain babel shorthand characters.) If the second parameter is empty, its an internal link, otherwise we need to open another file or a URL. A link start has a type, and a URL.

```

4899 \def\hyper@link{\let\Hy@reserved@a\relax
4900  \@ifnextchar[{\hyper@link@}{\hyper@link@[link]}%
4901 }
4902 \def\hyper@link@[#1]#2#3#4{%

4925 }

```

The problem here is that the first (URL) parameter may be a local `file:` reference (in which case some browsers treat it differently) or a genuine URL, in which case we'll have to activate a real Web browser. Note that a simple name is also a URL, as that is interpreted as a relative file name. We have to worry about `#` signs in a local file as well.

```
4926 \def\hyper@readexternallink#1\\#2#3#4{%
4927   \begingroup
4928   \let\\\relax
4929   \expandafter\endgroup
4930   \expandafter\@hyper@readexternallink#1\\{#2}{#3}{#4}%
4931 }
4932 \def\@hyper@readexternallink#1\\#2#3#4{%
```

Parameters are:

1. The URL or file name
2. The type
3. The internal name
4. The link string

We need to get the 1st parameter properly expanded, so we delimit the arguments rather than passing it inside a group.

```
4933 \@hyper@readexternallink{#2}{#3}{#4}#1:\\{#1}%
4934 }
```

Now (potentially), we are passed: 1) The link type 2) The internal name, 3) the link string, 4) the URL type (http, mailto, file etc), 5) the URL details 6) anything after a real : in the URL 7) the whole URL again

```
4935 \def\@pdftempwordfile{file}%
4936 \def\@pdftempwordrun{run}%
4937 \def\@hyper@readexternallink#1#2#3#4:#5:#6\\#7{%
```

If there are no colons at all (`#6` is blank), its a local file; if the URL type (`#4`) is blank, its probably a Mac filename, so treat it like a `file:` URL. The only flaw is if its a relative Mac path, with several colon-separated elements — then we lose. Such names must be prefixed with an explicit `dvi`:

```
4938 \ifx\\#6\\%
4939   \@hyper@linkfile file:#7\\{#3}{#2}{#7}%
4940 \else
4941   \ifx\\#4\\%
4942     \@hyper@linkfile file:#7\\{#3}{#2}{#7}%
4943 \else
```

If the URL type is ‘file’, pass it for local opening

```
4944 \def\@pdftempa{#4}%
4945 \ifx\@pdftempa\@pdftempwordfile
4946   \@hyper@linkfile#7\\{#3}{#2}{#7}%
4947 \else
```

if it starts ‘run:’, its to launch an application.

```
4948 \ifx\@pdftempa\@pdftempwordrun
4949   \ifHy@pdflatex
4950     \Hy@Error{%
4951       PDF/A: Launch action is prohibited%
4952     } \else
4953   \begingroup
```

```

4954      \leavevmode
4955      #2%
4956      \endgroup
4957      \else
4958          \hyper@launch{\#7}{\#3}{\#2}%
4959      \fi
4960      \else

```

otherwise its a URL

```

4961          \hyper@linkurl{\#3}{\#7}{\ifx{\#2}{\else{\hyper@hash{\#2}}}\fi}%
4962          \fi
4963          \fi
4964          \fi
4965      \fi
4966  }

```

By default, turn run: into file:

```

4967 \def\hyper@launch{run:#1{\#2#3}{% filename, anchor text, linkname
4968   \hyper@linkurl{\#2}{%
4969     \Hy@linkfileprefix
4970     \#1%
4971     \ifx{\#3}{\%
4972     \else
4973       \hyper@hash
4974       \#3%
4975     \fi
4976   }%
4977 }

```

D P Story <story@uakron.edu> pointed out that relative paths starting .. fell over. Switched to using \filename@parse to solve this.

```

Anchors have a name, and marked text. We have to be careful with the marked text, as if we break off part of something to put a `\special` around it, all hell breaks loose. Therefore, we check the category code of the first token, and only proceed if its safe. Tanmoy sorted this out.

A curious case arises if the original parameter was in braces. That means that `#2` comes here a multiple letters, and the `noexpand` just looks at the first one, putting the rest in the output. Yuck.

18 Compatibility with the *L^AT_EX2html* package

Map our macro names on to Nikos', so that documents prepared for that system will work without change.

Note, however, that the whole complicated structure for segmenting documents is not supported; it is assumed that the user will load `html.sty` first, and then `hyperref.sty`, so that the definitions in `html.sty` take effect, and are then overridden in a few circumstances by this package.

```

5072 \let\htmladdimg\hyperimage
5073 \def\htmladdnormallink{\#1\#2{\href{\#2}{\#1}}}
5074 \def\htmladdnormallinkfoot{\#1\#2{\href{\#2}{\#1}\footnote{\#2}}}
5075 \def\htmlref{\#1\#2{%
  \anchor{\#1}{\#2}%
  \label{\#2}{\#1}%
}}
5076 \label{\hyperref{\#2}{\#1}}{\#1}%
5077 }

```

This is really too much. The *L^AT_EX2html* package defines its own `\hyperref` command, with a different syntax. Was this always here? Its weird, anyway. We interpret it in the ‘printed’ way, since we are about fidelity to the page.

```

5078 \def\@latextohtml{\%
5079   \let\hhyperref\hyperref

5083   \postlabel{\#3\#4}%
5084   \#2\ref{\#3\#4}%
5085 }%
5086 }

```

19 Forms creation

Allow for creation of PDF or HTML forms. The effects here are limited somewhat by the need to support both output formats, so it may not be as clever as something which only wants to make PDF forms.

I (Sebastian) could not have started this without the encouragement of T V Raman.

19.1 Field flags

The field flags are organized in a bit set.

```
5087 \RequirePackage{bitset}
```

Each flag has a option name, an `\if` switch, and a bit position. The default is always ‘false’, the flag is clear. This is also the default of the switch created by `\newif`.

The names of the flags in the PDF specification (1.7) are used as lowercase option names.

```
\HyField@NewFlag #1: type: F annot flags, Ff field flags
#2: PDF name
#3: PDF position
5088 \def\HyField@NewFlag#1#2{%
5089   \lowercase{\HyField@NewOption{#2}}%
5090   \lowercase{\HyField@NewBitsetFlag{#2}{#2}{#1}}%
5091 }

\HyField@NewFlagOnly
5092 \def\HyField@NewFlagOnly#1#2{%
5093   \lowercase{\HyField@NewBitsetFlag{#2}{#2}{#1}}%
5094 }

\HyField@NewOption #1: option name
5095 \def\HyField@NewOption#1{%
5096   \expandafter\newif\csname ifFld@#1\endcsname
5097   \define@key{Field}{#1}[true]{%
5098     \lowercase{\Field@boolkey{##1}{#1}}%
5099   }%
5100 }

\HyField@NewBitsetFlag Package ‘bitset’ uses zero based positions, the PDF specification starts with one.

5183 \HyField@NewFlag{Ff}{CommitOnSelChange}{27}% PDF 1.5

```

Signature fields are not supported.

Until 6.76i hyperref uses field option ‘combo’ to set three flags ‘Combo’, ‘Edit’, and ‘Sort’. Option ‘popdown’ sets flag ‘Combo’ only.

```

5184 \newif\ifFld@popdown
5185 \define@key{Field}{popdown}[true]{%
5186   \lowercase{\Field@boolkey{#1}}{popdown}%
5187 }

```

Annotation flags. The form objects are widget annotations. There are two flags for readonly settings, the one in the annotation flags is ignored, instead the other in the field flags is used.

Flag `Print` is not much useful, because hyperref do not use the appearance entry of the annotations for most fields.

```

22 Localized nullifying of package

Sometimes we just don't want the wretched package interfering with us. Define an environment we can put in manually, or include in a style file, which stops the hypertext functions doing anything. This is used, for instance, in the Elsevier classes, to stop `hyperref` playing havoc in the front matter.

```

```

23 Package nohyperref

This package is introduced by Sebastian Rahtz.

Package nohyperref is a dummy package that defines some low level and some top-level commands. It is done for jadetex, which calls hyperref low-level commands, but it would also be useful with people using normal hyperref, who really do not want the package loaded at all.

Some low-level commands:

```
6049 (*nohyperref)
6050 \RequirePackage{letltxmacro}[2008/06/13]
6051 \let\hyper@anchor@\gobble
6052 \def\hyper@link#1#2#3{#3}%
6053 \let\hyper@anchorstart@\gobble
6054 \let\hyper@anchorend@\empty
6055 \let\hyper@linkstart@\gobbletwo
6056 \let\hyper@linkend@\empty
6057 \def\hyper@linkurl#1#2{#1}%
6058 \def\hyper@linkfile#1#2#3{#1}%
6059 \def\hyper@link@[#1]#2#3{}%
6060 \let\PDF@SetupDoc@\empty
6061 \let\PDF@FinishDoc@\empty
6062 \def\nohyperpage#1{#1}
```

Some top-level commands:

```
6063 \def\Acrobatmenu#1#2{\leavevmode#2}
6064 \let\pdfstringdefDisableCommands@\gobbletwo
6065 \let\texorpdfstring@\firstoftwo
6066 \let\pdfbookmark@\undefined
6067 \newcommand\pdfbookmark[3][]{}
6068 \let\phantomsection@\empty
6069 \let\hypersetup@\gobble
6070 \let\hyperbaseurl@\gobble
6071 \newcommand*\href[3][]{#3}
6072 \let\hyperdef@\gobbletwo
6073 \let\hyperlink@\gobble
6074 \let\hypertarget@\gobble
6075 \def\hyperref{%
6076   \ifnextchar[ \gobbleopt{\expandafter\gobbletwo\gobble}%
6077 }
6078 \long\def\gobbleopt[#1]{}
6079 \let\hyperpage@\empty
```

Ignore star from referencing macros:

```
6080 \LetLtxMacro\NoHy@OrgRef\ref
6081 \DeclareRobustCommand*\ref{%
6082   \ifstar\NoHy@OrgRef\NoHy@OrgRef
6083 }
6084 \LetLtxMacro\NoHy@OrgPageRef\pageref
6085 \DeclareRobustCommand*\pageref{%
6086   \ifstar\NoHy@OrgPageRef\NoHy@OrgPageRef
6087 }
6088 
```

24 The Mangling Of Aux and Toc Files

Some extra tests so that the hyperref package may be removed or added to a document without having to remove .aux and .toc files (this section is by David

Carlisle) All the code is delayed to \begin{document}

```
6089 /*package)
6090 \Hy@AtBeginDocument{%
```

First the code to deal with removing the hyperref package from a document.

Write some stuff into the aux file so if the next run is done without hyperref, then \contentsline and \newlabel are defined to cope with the extra arguments.

```
6091 \if@filesw
6092   \ifHy@typexml
6093     \immediate\closeout\@mainaux
6094     \immediate\openout\@mainaux\jobname.aux\relax
6095     \immediate\write\@auxout{<relaxxml>\relax}%
6096   \fi
6097   \immediate\write\@auxout{%
6098     \string\providecommand\string\HyperFirstAtBeginDocument{%
6099       \string\AtBeginDocument}^^J%
6100     \string\HyperFirstAtBeginDocument{%
6101       \string\ifx\string\hyper@anchor\string\@undefined^^J%
6102         \string\global\string\let\string\oldcontentsline\string\contentsline^^J%
6103         \string\gdef\string\contentsline{%
6104           \string#1\string#2\string#3\string#4{%
6105             \string\oldcontentsline{%
6106               \string#1\{\string#2\}\{\string#3\}}^^J%
6107             \string\global\string\let\string\oldnewlabel\string\newlabel^^J%
6108             \string\gdef\string\newlabel\string#1\string#2{%
6109               \string\newlabelxx{\string#1}\string#2}^^J%
6110             \string\gdef\string\newlabelxx{%
6111               \string#1\string#2\string#3\string#4\string#5\string#6{%
6112                 \string\oldnewlabel{\string#1}{\string#2}{\string#3}}}}^^J%
```

But the new aux file will be read again at the end, with the normal definitions expected, so better put things back as they were.

```
6113   \string\AtEndDocument{%
6114     \string\ifx\string\hyper@anchor\string\@undefined^^J%
6115     \string\let\string\contentsline\string\oldcontentsline^^J%
6116     \string\let\string\newlabel\string\oldnewlabel^^J%
6117     \string\fi%
6118   }^^J%
```

If the document is being run with hyperref put this definition into the aux file, so we can spot it on the next run.

```
6119   \string\fi%
6120 }^^J%
6121 \string\global\string\let\string\hyper@last\relax^^J%
6122 \string\gdef\string\HyperFirstAtBeginDocument\string#1{\string#1}%
6123 }%
6124 \fi
6125 \let\HyperFirstAtBeginDocument\ltx@firstofone
```

Now the code to deal with adding the hyperref package to a document with aux and toc written the standard way.

If hyperref was used last time, do nothing. If it was not used, or an old version of hyperref was used, don't use that TOC at all but generate a warning. Not ideal, but better than failing with pre-5.0 hyperref TOCs.

```
6126 \ifx\hyper@last\@undefined
6127   \def\@starttoc#1{%
6128     \begingroup
6129       \makeatletter
```

```

6130      \IfFileExists{\jobname.\#1}{%
6131          \Hy@WarningNoLine{%
6132              old #1 file detected, not used; run LaTeX again%
6133          }%
6134      }{%
6135          \if@filesw
6136              \expandafter\newwrite\csname tf@\#1\endcsname
6137              \immediate\openout\csname tf@\#1\endcsname \jobname.\#1\relax
6138          \fi
6139          \cnobreakfalse
6140      \endgroup
6141  }%
6142  \def\newlabel#1#2{\@newl@bel r{\#1}{#2}{}}{}}%
6143 \fi
6144 }

```

25 Title strings

If options `pdftitle` and `pdfauthor` are not used, these informations for the pdf information dictionary can be extracted by the `nd`

```

6145 \ifHy@pdfusetitle
6146   \let\HyOrg@title\title
6147   \let\HyOrg@author\author
6148   \def\title{\@ifnextchar[{\Hy@scantitle}{\Hy@scantitle}}{}}%
6149   \def\Hy@scantitle[#1]{%
6150     \gdef\Hy@title{#1}%
6151     \HyOrg@title{#1}%
6152   }%
6153   \def\Hy@scantitle#1{%
6154     \gdef\Hy@title{#1}%
6155     \HyOrg@title{#1}%
6156   }%
6157   \def\author{\@ifnextchar[{\Hy@scantauthor}{\Hy@scantauthor}}{}}%
6158   \def\Hy@scantauthor[#1]{%
6159     \gdef\Hy@author{#1}%
6160     \HyOrg@author{#1}%
6161   }%
6162   \def\Hy@scantauthor#1{%
6163     \gdef\Hy@author{#1}%
6164     \HyOrg@author{#1}%
6165   }%

```

The case, that `or` `re` given before `hyperref` is loaded, is much more complicate, because LaTeX initializes the macros `title` and `author` with LaTeX error and warning messages.

```

6166 \begingroup
6167 \def\process@me#1@nil#2{%
6168   \expandafter\let\expandafter\x\csname @#2\endcsname
6169   \edef\y{\expandafter\strip@prefix\meaning\x}%
6170   \def\c##1#1##2@nil{%
6171     \ifx\##1\%
6172     \else
6173       \expandafter\gdef\csname Hy@#2\expandafter\endcsname
6174         \expandafter{\x}%
6175     \fi
6176   }%

```

```

6177     \expandafter\c\y\relax#1\@nil
6178   }%
6179   \expandafter\process@me\string\@latex@{\@nil{title}}%
6180   \expandafter\process@me\string\@latex@{\@nil{author}}%
6181   \endgroup
6182 \fi
6183 \Hy@DisableOption{pdfusetitle}

```

Macro `\Hy@UseMaketitleInfos` is used in the driver files, before the information entries are used.

The newline macro `\newline` or `\\\` is much more complicate. In the title a good replacement can be a space, but can be already a space after `\\\` in the title string. So this space is removed by scanning for the next non-empty argument.

In the macro `\author` the newline can perhaps separate the different authors, so the newline expands here to a comma with space.

The possible arguments such as space or the optional argument after the newline macros are not detected.

```

    Option ‘pdfpagelabels’ has been used and is now disabled.
6399 \Hy@DisableOption{pdfpagelabels}
6400 </package>

```

27.1.1 pdfTeX and VTeX

Because of pdfTeX’s \pdfcatalog command the /PageLabels entry can set at end of document in the first run.

```
\Hy@PutCatalog
6401 <*pdftex>
6402 \pdf@ifdraftmode{%
6403   \let\Hy@PutCatalog\ltx@gobble
6404 }{%
6405   \let\Hy@PutCatalog\pdfcatalog
6406 }
6407 </pdftex>
```

The code for VTeX is more complicate, because it does not allow the direct access to the /Catalog object. The command scans its argument and looks for a /PageLabels entry.

VTeX 6.59g is the first version, that implements \special{!pdfpagelabels...}. For this version \VTeXversion reports 660.

```

6408 <*vtex>

28 Automated L^AT_EX hypertext cross-references

Anything which can be referenced advances some counter; we overload this to put in a hypertext starting point (with no visible anchor), and make a note of that for later use in \label. This will fail badly if \theH<name> does not expand to a sensible reference. This means that classes or package which introduce new elements need to define an equivalent \theH<name> for every \the<name>. We do make a trap to make \theH<name> be the same as \arabic{<name>}, if \theH<name> is not defined, but this is not necessarily a good idea. Alternatively, the ‘naturalnames’ option uses whatever L^AT_EX provides, which may be useable. But then its up to you to make sure these are legal PDF and HTML names. The ‘hypertexnames=false’ option just makes up arbitrary names.

All the shenanigans is to make sure section numbers etc are always arabic, separated by dots. Who knows how people will set up \currentlabel? If they put spaces in, or brackets (quite legal) then the hypertext processors will get upset.

But this is flaky, and open to abuse. Styles like subeqn will mess it up, for starters. Appendices are an issue, too. We just hope to cover most situations. We can at least cope with the standard sectioning structure, allowing for \part and \chapter.

Start with a fallback for equations

29 Package lastpage support

Package lastpage directly writes the `\newlabel` command to the aux file. Because package hyperref requires additional arguments, the internal command `\lastpage@putlabel` is redefined. The patch is deferred by `\AtBeginDocument`, because it is possible that package lastpage is loaded after package hyperref. The same algorithm (options hypertexnames and plainpages) is used to get the page anchor name as in `\Hy@EveryPageAnchor` (see sec. 38). The link will not work if option pageanchor is set to false.

```

6877 }{}
```

Package titletoc support:

```
6878 \@ifpackageloaded{titletoc}{%
6879   \def\ttl@gobblecontents#1#2#3#4{\ignorespaces}%
6880 }{}
```

32 Package varioref support

Package nameref uses five arguments for the ref system. Fix provided by Felix Neubauer (felix.neubauer@gmx.net).

```
6881 \def\Hy@varioref@undefined{{?}{?}{?}{?}{?}}
6882 \@ifpackageloaded{varioref}{%
6883   \def\vref@pagenum#1#2{%
6884     \@ifundefined{r@#2}{%
6885       \expandafter\let\csname r@#2\endcsname\Hy@varioref@undefined
6886     }{%
6887       \edef#1{\getpagerefnumber{#2}}%
6888     }%
6889 }{}}
```

Package variorref redefines \refstepcounter, thus it needs fixing, if the package is loaded *after* hyperref.

```

6890 \def\Hy@variorref@refstepcounter#1{%
6891   \stepcounter{#1}%
6892   \protected@edef\@currentlabel{%
6893     \csname p@\#1\expandafter\endcsname\csname the\#1\endcsname
6894   }%
6895 }
6896 \AtBeginDocument{%
6897   \ifx\refstepcounter\Hy@variorref@refstepcounter
6898     \let\H@refstepcounter\refstepcounter
6899     \let\refstepcounter\Hy@saved@refstepcounter
6900   \fi
6901 }

```

33 Package longtable support

Sometimes the anchor of the longtable goes to the previous page. Thus the following patch separates the anchor setting and counter incrementation by hyperref's \refstepcounter and the anchor setting is moved after \vskip\LTpre.

Patch of \LT@array: replace \refstepcounter by the original \H@refstepcounter without anchor generation

```

6902 \@ifpackageloaded{longtable}{%
6903   \begingroup
6904   \def\y{\LT@array}%
6905   \@ifundefined{scr@LT@array}{%
6906     \ifundefined{adl@LT@array}{}{\def\y{\adl@LT@array}}%
6907   }{\def\y{\scr@LT@array}}%
6908   \long\def\x{\refstepcounter#1\#2\sharp\#4\@nil{%
6909     \expandafter\endgroup
6910     \expandafter\def\y[##1]##2{%
6911       \H@refstepcounter{#1}%
6912       \hyper@makecurrent{table}%
6913       \let\Hy@LT@currentHref\@currentHref

6929   }%
6930 }%
6931 \expandafter\x\LT@start\@nil
6932 }{%

```

34 Equations

We want to make the whole equation a target anchor. Overload equation, temporarily reverting to original `\refstepcounter`. If, however, it is in AMS math, we do not do anything, as the tag mechanism is used there (see section 41). The exception is that we move the equation incrementation inside the math environment to avoid specials outside and a wrong vertical spacing of equation environments.

```
6933 \let\new@refstepcounter\refstepcounter
6934 \let\H@equation\equation
6935 \let\H@endequation\endequation
6936 \@ifpackageloaded{amsmath}{%

6974   \fi
6975   \H@endequation
6976 }%
6977 }
```

My goodness, why can't L^AT_EX be consistent? Why is `\eqnarray` set up differently from other objects?

People (you know who you are, Thomas Beuth) sometimes make an eqnarray where *all* the lines end with `\notag`, so there is no suitable anchor at all. In this case, pass by on the other side.

```

6978 \newif\if@eqnstar
6979 \@eqnstarfalse
6980 \let\H@eqnarray\eqnarray
6981 \let\H@endeqnarray\endeqnarray
6982 \def\eqnarray{%
6983   \let\Hy@reserved@a\relax
6984   \def\@currentHref{}%
6985   \H@eqnarray
6986   \if@eqnstar
6987   \else
6988     \ifx\\@\currentHref\\%

6999       }%
7000     \fi
7001   \fi
7002 }
7003 \def\endeqnarray{%
7004   \H@endeqnarray
7005 }

```

This is quite heavy-handed, but it works for now. If its an `eqnarray*` we need to disable the hyperref actions. There may well be a cleaner way to trap this. Bill Moss found this.

```

7006 \@namedef{eqnarray*}{%
7007   \def\@eqncr{\nonumber\@seqncr}\@eqnstartrue\eqnarray
7008 }
7009 \@namedef{endeqnarray*}{%
7010   \nonumber\endeqnarray\@eqnstarfalse
7011 }

```

Then again, we have the `subeqnarray` package. Tanmoy provided some code for this:

```

7012 \ltx@ifUndefined{subeqnarray}{}{%
7013   \let\H@subeqnarray\subeqnarray
7014   \let\H@endsubeqnarray\endsubeqnarray
7015   \def\subeqnarray{%
7016     \let\Hy@reserved@a\relax
7017     \H@subeqnarray
7018     \@ifundefined{theHequation}{%
7019       \make@stripped@name{\theequation}%
7020       \let\theHequation\newname
7021     }%
7022     \hyper@makecurrent{equation}%
7023     \hyper@anchorstart{\@currentHref}{}\hyper@anchorend
7024   }%
7025   \def\endsubeqnarray{%

```

```

7026   \H@endsubeqnarray
7027 }
7028 \providecommand{\theHsubequation}{\theHequation\alph{subequation}}%
7029 }

```

The aim of this macro is to produce a sanitized version of its argument, to make it a safe label.

```

7030 \def\make@stripped@name#1{%
7031   \begingroup
7032   \escapechar\m@ne

35 Footnotes

The footnote mark is a hypertext link, and the text is a target. We separately number the footnotes sequentially through the text, separately from whatever labels the text assigns. Too hard to keep track of markers otherwise. If the raw forms `\footnotemark` and `\footnotetext` are used, force them to use un-hyper original.

Redefine `\@footnotemark`, borrowing its code (at the cost of getting out of sync with `latex.ltx`), to take advantage of its white space and hyphenation fudges. If we just overload it, we can get variant documents (the word before the footnote is treated differently). Thanks to David Carlisle and Brian Ripley for confusing and helping me on this.

37 Bibliographic references

This is not very robust, since many styles redefine these things. The package used to redefine `\@citex` and the like; then we tried adding the `hyperref` call explicitly into the `.aux` file. Now we redefine `\bibcite`; this still breaks some citation packages so we have to work around them. But this remains extremely dangerous. Any or all of `achemso` and `drftcite` may break.

However, lets make an attempt to get *natbib* right, because thats a powerful, important package. Patrick Daly (daly@linmpi.mpg.de) has provided hooks for us, so all we need to do is activate them.

```

7531 \def\hyper@natlinkstart#1{%
7532   \Hy@backout{#1}%
7533   \hyper@linkstart{cite}{cite.#1}%
7534   \def\hyper@nat@current{#1}%

7544 }
7545 \def\hyper@natanchorend{\hyper@anchorend}

```

Do not play games if we have *natbib* support. Macro `\extra@binfo` added for chapterbib support. Chapterbib also wants `\@extra@binfo` in the hyper-link, but since the link tag is not expanded immediately, we use `\@extra@b@citeb`, so cites in a chapter will link to the bibliography in that chapter.

```

37.1 Package harvard

Override Peter Williams' Harvard package; we have to a) make each of the citation types into a link; b) make each citation write a backref entry, and c) kick off a backreference section for each bibliography entry.

The redefinitions have to be deferred to `\begin{document}`, because if `harvard.sty` is loaded and `html.sty` is present and detects pdf_TE_X, then hyperref is already loaded at the begin of `harvard.sty`, and the `\newcommand` macros causes error messages.

```

7791 }%
7792 }{}}

```

38 Page numbers

The last page should not contain a /Dur key, because there is no page after the last page. Therefore at the last page there should be a command `\hypersetup{pdfpageduration={}}.` This can be set with `\AtEndDocument`, but it can be too late, if the last page is already finished, or too early, if lots of float pages will follow. Therefore currently nothing is done by hyperref.

This where we supply a destination for each page.

```

7985 }%
7986 }
```

41 AMS^LA_TE_X compatibility

Oh, no, they don't use anything as simple as `\refstepcounter` in the AMS! We need to intercept some low-level operations of theirs. Damned if we are going to try and work out what they get up to. Just stick a label of 'AMS' on the front, and use the label *they* worked out. If that produces something invalid, I give up. They'll change all the code again anyway, I expect (SR).

Version 6.77p uses a patch by Ross Moore.

```

41.1 `\@addtoreset` and `\numberwithin` patches

`\@addtoreset` puts a counter to the reset list of another counter. After a reset the counter starts again with perhaps already used values. Therefore the hyperref version of the counter print command `\theHcounter` is redefined in order to add the parent counter.

```

8020 \let\HyOrg@addtoreset\@addtoreset
8021 \def\@addtoreset#1#2{%
8022   \HyOrg@addtoreset{#1}{#2}%
8023   \expandafter\xdef\csname theH#1\endcsname{%
8024     \expandafter\noexpand
8025       \csname the\@ifundefined{theH#2}{}H#2\endcsname
8026     .\noexpand\the\noexpand\value{#1}%
8027   }%
8028 }
```

`\numberwithin` A appropriate definition of hyperref's companion counter (`\theH...`) is added for correct link names.

```

43 hyperindex entries

Internal command names are prefixed with \HyInd@.

Hyper-indexing works crudely, by forcing code onto the end of the index entry with the | feature; this puts a hyperlink around the printed page numbers. It will not proceed if the author has already used the | specifier for something like emboldening entries. That would make Makeindex fail (cannot have two | specifiers). The solution is for the author to use generic coding, and put in the requisite \hyperpage in his/her own macros along with the boldness.

This section is poor stuff; it's open to all sorts of abuse. Sensible large projects will design their own indexing macros any bypass this.

```

This breaks TeX4ht, so leave it to last. Emend `\csetref` to put out a hypertext link as well as its normal text (which is used as an anchor). (`\endinput` have to be on the same line like `\fi`, or you have to use `\expandafter` before.)

```

8420 \ifHy@texht
8421   \expandafter\endinput
8422 \fi
8423 \let\real@csetref\csetref
8424 \def\csetref#1#2#3{%
8425   \csname extract group, refname

46.1 PS/PDF strings

Some drivers write PS or PDF strings. These strings are delimited by parentheses, therefore a lonely unmatched parenthesis must be avoided to avoid PS or PDF syntax errors. Also the backslash character itself has to be protected.

\Hy@pstringdef Therefore such strings should be passed through \Hy@pstringdef. The first argument holds a macro for the result, the second argument is the string that needs protecting. Since version 1.30.0 pdfTeX offers \pdfescapestring.

This driver is for Han The Thanh's TeX variant which produces PDF directly.
This has new primitives to do PDF things, which usually translate almost directly
to PDF code, so there is a lot of flexibility which we do not at present harness.

Set PDF version if requested by option pdfversion.

8862      \pdfliteral page{/OC/OCPrint BDC}%
8863      \rlap{\copy0}%
8864      \pdfliteral page{EMC/OC/OCView BDC}%
8865      \begingroup
8866      \expandafter\HyColor@UseColor\Hy@ocgcolor
8867      \box0 %
8868      \endgroup
8869      \pdfliteral page{EMC}%
8870      }%
8871      \fi
8872      \endgroup
8873      }%
8874      }%
8875      \else
8876      \Hy@DisableOption{ocgcolorlinks}%
8877      \fi

```

First, allow for some changes and additions to pdftex syntax:

```

8878 \def\setpdfinkmargin#1{\pdfinkmargin#1}
8879 \ifx\pdfstartlink\@undefined% less than version 14

```

```

8880 \let\pdfstartlink\pdfannotlink
8881 \let\pdflinkmargin\@tempdima
8882 \let\pdfxform\pdfform
8883 \let\pdflastxform\pdflastform
8884 \let\pdfrefxform\pdfrerform
8885 \else
8886 \pdflinkmargin1pt %
8887 \fi

First set up the default linking
8888 \providecommand*{\pdfview}[XYZ]{}

First define the anchors:
8889 \Hy@WrapperDef{\new@pdflink}{%
8890   \ifhmode
8891     \savesf{spacefactor}
8892   \fi
8893   \Hy@SaveLastskip
8894   \Hy@VerboseAnchor{#1}%
8895   \Hy@PStringDef{\Hy@PStringDest}{\HyperDestNameFilter{#1}}%
8896   \Hy@DestName\Hy@PStringDest{\pdfview}
8897   \Hy@RestoreLastskip
8898   \ifhmode
8899     \spacefactor\savesf
8900   \fi
8901 }
8902 \let\pdf@endanchor\empty

```

\Hy@DestName Wrap the call of \pdfdest name in \Hy@DestName. Then it can easier be catched by package hypdestopt.

```

8903 \def{\Hy@DestName}{#1}{%
8904   \pdfdest{#1}{#2}\relax
8905 }

```

Now the links; the interesting part here is the set of attributes which define how the link looks. We probably want to add a border and color it, but there are other choices. This directly translates to PDF code, so consult the manual for how to change this. We will add an interface at some point.

```

8906 \providecommand*{\pdfborder}[0 0 1]
8907 \providecommand*{\pdfborderstyle}{}

46.2.1 Fix for problem with different nesting levels

\AtBeginShipoutFirst adds an additional box layer around the first output page. This disturbs pdfTeX's low level link commands \pdfstartlink and \pdfendlink, if a link is broken across the first and second output page.

The problem could be fixed by replacing \AtBeginShipoutFirst, because the box layer is not necessary for pdfTeX – no \specials need to be inserted. However it's easier to add an additional box level for the pages after the first one. Also \AtBeginShipoutFirst could be invoked independently from hyperref.

```

```

46.3 hypertex

The HyperTeX specification (this is borrowed from an article by Arthur Smith) says that conformant viewers/translators must recognize the following set of \special commands:

```

href: html:<a href = "href_string">
name: html:<a name = "name_string">
```

```

end: html:</a>
image: html:<img src = "href_string">
base_name: html:<base href = "href_string">
```

The *href*, *name* and *end* commands are used to do the basic hypertext operations of establishing links between sections of documents. The *image* command is intended (as with current html viewers) to place an image of arbitrary graphical format on the page in the current location. The *base_name* command is be used to communicate to the *dvi* viewer the full (URL) location of the current document so that files specified by relative URL's may be retrieved correctly.

The *href* and *name* commands must be paired with an *end* command later in the *T_EX* file — the *T_EX* commands between the two ends of a pair form an *anchor* in the document. In the case of an *href* command, the *anchor* is to be highlighted in the *dvi* viewer, and when clicked on will cause the scene to shift to the destination specified by *href_string*. The *anchor* associated with a name command represents a possible location to which other hypertext links may refer, either as local references (of the form *href="#name_string* with the *name_string* identical to the one in the name command) or as part of a URL (of the form *URL#name_string*). Here *href_string* is a valid URL or local identifier, while *name_string* could be any string at all: the only caveat is that ‘’ characters should be escaped with a backslash (\), and if it looks like a URL name it may cause problems.

46.4 dviwindo

[This was developed by David Carlisle]. Within a file dviwindo hyperlinking is used, for external URL's a call to \wwwbrowser is made. (You can define this command before or after loading the hyperref package if the default c:/netscape/netscape is not suitable) Dviwindo could in fact handle external links to dvi files on the same machine without calling a web browser, but that would mean parsing the URL to recognise such, and this is currently not done.

This was more or less blindly copied from the hypertex cfg. For dviwindo, L^AT_EX must specify the size of the active area for links. For some hooks this information is available but for some, the start and end of the link are specified separately in which case a fixed size area of 1000000sp wide by \baselineskip high is used.

```

10699       \ifx\@pdfpagetransition\@empty

```

Standard incantation.

1. Does an old entry have to be deleted? 2. If 1=yes, how to delete?

```

10700   \else
10701     \hvtex@parse@trans\@pdfpagetransition
10702   \fi
10703 \fi
10704 }%

```

I have to write an “honest” parser to convert raw PDF code into VTeX
`\special{AVK}`

Syntax of VTeX `\special{!trans <transition_effect>}:`

```

<transition_effect> ::= <transition_style>[,<transition_duration>]
<transition_style> ::= <Blinds_effect> | <Box_effect> |
                      <Dissolve_effect> | <Glitter_effect> |

```

```

<Split_effect> | <Wipe_effect>
<Blinds_effect> ::= B[<effect_dimension>]
<Box_effect> ::= X[<effect_motion>]
<Dissolve_effect> ::= D
<Glitter_effect> ::= G[<effect_direction>]
<Split_effect> ::= S[<effect_motion>][<effect_dimension>]
<Wipe_effect> ::= W[<effect_direction>]
<Replace_effect> ::= R
<effect_direction> ::= <number>
<effect_dimension> ::= H | V
<effect_motion> ::= I | O
<transition_duration> ::= <number>

```

Transition codes:

```

10705 \def\hvtex@trans@effect@Blinds{\def\hvtex@trans@code{B}}%
10706 \def\hvtex@trans@effect@Box{\def\hvtex@trans@code{X}}%
10707 \def\hvtex@trans@effect@Dissolve{\def\hvtex@trans@code{D}}%
10708 \def\hvtex@trans@effect@Glitter{\def\hvtex@trans@code{G}}%
10709 \def\hvtex@trans@effect@Split{\def\hvtex@trans@code{S}}%
10710 \def\hvtex@trans@effect@Wipe{\def\hvtex@trans@code{W}}%
10711 \def\hvtex@trans@effect@R{\def\hvtex@trans@code{R}}%

```

Optional parameters:

```

10712 \def\hvtex@par@dimension{/Dm}%
10713 \def\hvtex@par@direction{/Di}%
10714 \def\hvtex@par@duration{/D}%
10715 \def\hvtex@par@motion{/M}%

```

Tokenizer:

```

10716 \def\hvtex@gettoken{%
10717 \expandafter\hvtex@gettoken@\hvtex@buffer\@nil
10718 }%

```

Notice that tokens in the input buffer must be space delimited.

```

10719 \def\hvtex@gettoken@#1 #2\@nil{%
10720 \edef\hvtex@token{\#1}%
10721 \edef\hvtex@buffer{\#2}%
10722 }%
10723 \def\hvtex@parse@trans#1{%

```

Initializing code:

```

10724 \let\hvtex@trans@code\@empty

46.7 Fix for Adobe bug number 466320

If a destination occurs at the very begin of a page, the destination is moved to the previous page by Adobe Distiller 5. As workaround Adobe suggests:

```

/showpage {
  //showpage
  clippath stroke erasemode
} bind def

```

But unfortunately this fix generates an empty page at the end of the document. Therefore another fix is used by writing some clipped text.

```

10946 <dviwindo>\def\literalps@out#1{\special{ps:#1}}%
10947 <package>\providecommand*\Hy@DistillerDestFix{}%

We define a single macro, pdfmark, which uses the ‘keyval’ system to define the various allowable keys; these are *exactly* as listed in the pdfmark reference for Acrobat 3.0. The only addition is pdfmark which specifies the type of pdfmark to create (like ANN, LINK etc). The surrounding round and square brackets in the pdfmark commands are supplied, but you have to put in / characters as needed for the values.

```

```

The complicated bit is working out the right enclosing rectangle of some piece of TeX text, needed by the /Rect key. This solution originates with Toby Thain (tobyt@netspace.net.au).

For the case breaklinks is enabled, I have added two hooks, the first one for package setouterhbox, it provides a hopefully better method without setting the

text twice.

```
\usepackage[hyperref]{setouterhbox}
```

With the second hook, also you can set the text twice, e.g.:

```

Unfortunately, some parts of the `pdfmark` PostScript code depend on vagaries of the dvi driver. We isolate here all the problems.

46.9 Rokicki's dvips

`dvips` thinks in 10ths of a big point, its coordinate space is resolution dependent, and its *y* axis starts at the top of the page. Other drivers can and will be different!

The work is done in `SDict`, because we add in some header definitions in a moment.

```

11683 /*dvips*/
11684 \providecommand*\XR@ext}{pdf}

Unless I am going mad, this *appears* to be the relationship between the default coordinate system (PDF), and dvips;

```

/DvipsToPDF { .01383701 div Resolution div } def
/PDFToDvips { .01383701 mul Resolution mul } def

```

the latter's coordinates are resolution dependent, but what that .01383701 is, who knows? well, almost everyone except me, I expect...And yes, Maarten Gelderman <mgelderman@econ.vu.nl> points out that its 1/72.27 (the number of points to an inch, big points to inch is 1/72). This also suggests that the code would be more understandable (and exact) if 0.013 div would be replaced by 72.27 mul, so here we go. If this isn't right, I'll revert it.

```

11699 /DvipsToPDF{72.27 mul Resolution div} def%
11700 /PDFToDvips{72.27 div Resolution mul} def%
11701 /BPToDvips{72 div Resolution mul}def%

```

The values inside the /Boder array are not taken literally, but interpreted by ghostscript using the resolution of the dvi driver. I don't know how other distiller programs behaves in this manner.

```

```

The calculation of upper left *y* is done without raising the point in T_EX, by simply adding on the current \baselineskip to the current *y*. This is usually too much, so we remove a notional 2 points.

We have to see what the current baselineskip is, and convert it to the dvips coordinate system.

Argument: baselineskip in pt. The x and y coordinates of the current point, minus the baselineskip

46.10 VTeX's `vtexpdfmark` driver

This part is derived from the dvips (many names reflect this).

The origin seems to be the same as TeX's origin, 1 in from the left and 1 in downwards from the top. The direction of the y axis is downwards, the opposite

of the dvips case. Units seems to be pt or bp.

```

46.11 Textures

```

11825 (*textures)
11826 \providecommand*\{\XR@ext\}{pdf}

```

At the suggestion of Jacques Distler (distler@golem.ph.utexas.edu), try to derive a suitable driver for Textures. This was initially a copy of dvips, with some guesses about Textures behaviour. Ross Moore (ross@maths.mq.edu.au) has added modifications for better compatibility, and to support use of pdfmark.

Start by defining a macro that expands to the end-of-line character. This will be used to format the appearance of PostScript code, to enhance readability, and avoid excessively long lines which might otherwise become broken to bad places.

\Hy@ps@CR The macro \Hy@ps@CR contains the end-of-line character.

```

11827 \begingroup
11828   \obeylines %
11829   \gdef\Hy@ps@CR{\noexpand
11830 }%
11831 \endgroup %

```

Textures has two types of \special command for inserting PostScript code directly into the dvi output. The ‘postscript’ way preserves TeX’s idea of where on the page the \special occurred, but it wraps the contents with a `save-restore` pair, and adjusts the user-space coordinate system for local drawing commands. The ‘rawpostscript’ way simply inserts code, without regard for the location on the page.

Thus, to put arbitrary PostScript coding at a fixed location requires using *both* \special constructions. It works by pushing the device-space coordinates onto the operand stack, where they can be used to transform back to the correct user-space coordinates for the whole page, within a ‘rawpostscript’ \special.

```

11832 \def\literalps@out#1{%
11833   \special{postscript 0 0 transform}%
11834   \special{rawpostscript itransform moveto\Hy@ps@CR #1}%
11835 }%
11836 %

```

The ‘prepostscript’ is a 3rd kind of \special, used for inserting definitions into the dictionaries, before page-building begins. These are to be available for use on all pages.

```

11837 \def\headerps@out#1{%
11838   \special{%
11839     prepostscript TeXdict begin\Hy@ps@CR

```

```

11840      #1\Hy@ps@CR
11841      end%
11842  }%
11843 }%
11844 %

```

To correctly support the `pdfmark` method, for embedding PDF definitions with `.ps` files in a non-intrusive way, an appropriate definition needs to be made *before* the file `pdfmark.def` is read. Other parameters are best set afterwards.

```

48 Bookmarks in the PDF file

This was originally developed by Yannis Haralambous (it was the separate `repere.sty`); it needed the `repere` or `makebook.pl` post-processor to work properly. Now redundant, as it is done entirely in L^AT_EX macros.

To write out the current section title, and its rationalized number, we have to intercept the `\@sect` command, which is rather dangerous. But how else to see the information we need? We do the *same* for `\@ssect`, giving anchors to unnumbered sections. This allows things like bibliographies to get bookmarks when used with a manual `\addcontentsline`

```

14019 \def\phantomsection{%
14020  \Hy@MakeCurrentHrefAuto{section*}%
14021  \Hy@raisedlink{\hyper@anchorstart{\@currentHref}\hyper@anchorend}%
14022 }%
14023 </package>

```

48.1 Bookmarks

```
14024 {*outlines}
```

This section was written by Heiko Oberdiek; the code replaces an earlier version by David Carlisle.

The first part of bookmark code is in section 6. Further documentation is available as paper and slides of the talk, that Heiko Oberdiek has given at the EuroTeX'99 meeting in Heidelberg. See `paper.pdf` and `slides.pdf` in the `doc` directory of `hyperref`.

When using the right-to-left typesetting based on ε-T_EX, the order of the `\BOOKMARK` commands written to the `\@outlinefile` could appear wrong, because of mis-feature of ε-T_EX's implementation (that it processes the shipped outlines left-to-right, instead of the order in which they appear in the document).

The wrong order will appear when the file contains two bookmarks on the same line typeset right-to-left.

To work around this problem, the `bookmark@seq@number` counter is used to write the bookmark's sequential number into a comment in the `\@outlinefile`, which could be used to post-process it to achieve the proper ordering of `\BOOKMARK` commands in that file.

Tobias Oetiker rightly points out that we need a way to force a bookmark entry. So we introduce \pdfbookmark, with two parameters, the title, and a symbolic name. By default this is at level 1, but we can reset that with the optional first argument.

```

14182   or use package 'bookmark'%}
14183 }%
14184 }

```

48.1.2 Driver stuff

The VTEX section was written originally by VTEX, but then amended by Denis Girou (denis.girou@idris.fr), then by Taco Hoekwater (taco.hoekwater@wkap.nl). The problem is that VTEX, with its close integration of the PDF backend, does look at the contents of bookmarks, escaping \ and the like.

```

14185 {*vtex}
14186 \newcount\@serial@counter\@serial@counter=1\relax

```

\hv@pdf@char Plain octal codes doesn't work with versions below 6.50. So for early versions hex numbers have to be used. It would be possible to program this instead of the large \ifcase, but I'm too lazy to sort that out now.

```

```

If there is no chapter number (`\frontmatter` or `\backmatter`) then `\refstepcounter{chapter}` is not executed, so there will be no destination for `\ddcontentsline`. So `\@chapter` is overloaded to avoid this:

```

14430 \ltx@ifundefined{@chapter}{}{%
14431   \let\Hy@org@chapter\@chapter

49 Compatibility with koma-script classes

```
14505 /*outlines | hypertex
```

Hard-wire in an unpleasant over-ride of komascript ‘scrbook’ class for Tobias Isenberg (Tobias.Isenberg@gmx.de). With version 6.71b the hack is also applied to ‘scrreprt’ class and is removed for koma-script versions since 2001/01/01, because Markus Kohm supports hyperref in komascript.

```

```

The canonical name of U+0138, small letter kra, would be \textkgreenlandic, following the glyph naming convention. However latex/base/inputenc.dtx has chosen \textkra.

```

There seems to be no variants of letters 'L' and 'l' with a dot above (reasonable). Therefore the \. accent is reused instead of making a separate accent macro \textmiddledot.
