

The `soulutf8` package

Heiko Oberdiek

<heiko.oberdiek at googlemail.com>

2007/09/09 v1.0

Abstract

This package extends package `soul` and adds some support for UTF-8. Namely the input encodings `utf8.def` from package `inputenc` and package `ucs`'s `utf8x.def` are supported.

1 Documentation

This package `soulutf8` does not have own options and does not define new user commands. Any option is passed to package `soul` [1] that is loaded first. Then some internal macros of `soul` are redefined to add support for UTF-8. The following input encodings are supported:

```
utf8    LATEX base   TDS:tex/latex/base/utf8.def [3]
utf8x   Package ucs   TDS:tex/latex/ucs/utf8x.def [2]
```

UTF-8 byte sequences are added as token group to a word, even if these UTF-8 characters are some kind of hyphen or space. As exception the following three Unicode characters are handled specially:

Slot	Name	Action
U+00A0	NO-BREAK SPACE	like ~
U+2013	EN DASH	--
U+2014	EM DASH	---

1.1 Patch

Also package `soulutf8` tries to patch package `soul` to improve its behaviour:

- A problem with additional levels of curly braces is fixed. As advantage more implicit kernings are detected. However, the result may be incompatible with the original behaviour of package `soul` because of these respected implicit kernings.
- ε -AT_EX, especially `\unexpanded` is supported. This allows a better protection of token groups (`\mbox{...}`, `math`, ...).

1.2 Future

Currently package `soul` does not seem to be maintained. Nevertheless if there will be a new version that adds support for UTF-8, then this package may become obsolete.

2 Implementation

1 `(*package)`

2.1 Reload check and package identification

Reload check, especially if the package is not used with L^AT_EX.

```

2.3 Loading packages

Package soul uses `\documentclass` to detect L^AT_EX.

```
129 \ifx\documentclass\undefined
```

2.3.1 plain T_EX

First we check, whether package `soul` is already loaded.

```
130 \expandafter\ifx\csname SOUL@\endcsname\relax
```

In case of plain T_EX package `soul` defines some macros in a simple manner that will break the definitions of `miniltx.tex`, for example. Therefore these macros are first saved and restored afterwards.

```
131 \let\SOuL@orgDeclareRobustCommand\DeclareRobustCommand
132 \let\SOuL@orgnewcommand \newcommand
133 \let\SOuL@orgDeclareOption \DeclareOption
134 \let\SOuL@orgPackageError \PackageError
135 \def\SOuL@restoretexcmds{%
136   \let\DeclareRobustCommand\SOuL@orgDeclareRobustCommand
137   \let\newcommand \SOuL@orgnewcommand
138   \let\DeclareOption \SOuL@orgDeclareOption
139   \let\PackageError \SOuL@orgPackageError
140 }%
141 \input soul.sty\relax
142 \SOuL@restoretexcmds
143 \fi
```

\SOuL@error Package `soul`'s use of `\PackageError` is replaced by `\@PackageError` of package `infwarerr`.

```
144 \input infwarerr.sty\relax
145 \let\SOuL@orgSOuL@error\SOuL@error
146 \def\SOuL@error{%
147   \begingroup
148   \let\PackageError\@PackageError
149   \SOuL@orgSOuL@error
150   \endgroup
151 }%
152 \input etexcmds.sty\relax
```

\@onellevel@sanitize Define L_AT_EX's `\@onellevel@sanitize` if not already available.

```
153 \expandafter\ifx\csname @onellevel@sanitize\endcsname\relax
154   \def\@onellevel@sanitize#1{%
155     \edef#1{%
156       \expandafter\strip@prefix\meaning#1%
157     }%
158   }%
```

```
\strip@prefix
159 \def\strip@prefix#1>{}%
160 \fi
161 \else
```

2.3.2 L_AT_EX

```
162 \DeclareOption*{\PassOptionsToPackage{\CurrentOption}{soul}}%
163 \ProcessOptions\relax
164 \RequirePackage{soul}[2003/11/17]%
165 \RequirePackage{infwarerr}[2007/09/09]%
166 \RequirePackage{etexcmds}[2007/09/09]%
167 \fi
```

2.3.3 ε-T_EX

In plain T_EX command `\+` is an *outer* macro. Therefore numbers are used to avoid problems.

```

168 \ifetex@unexpanded
169   \catcode33=14 % '!': comment
170   \catcode43=9  % '+': ignore
171 \else
172   \catcode33=9 % '!': ignore
173   \catcode43=14 % '+': comment
174 \fi

```

2.4 Macro for redefinitions

```

\SouL@redefine
175 \def\SouL@redefine#1{%
176   \begingroup
177   \def\SouL@cmd{\#1}%
178   \afterassignment\SouL@cmdcheck
179   \def\SouL@temp
180 }

\SouL@cmdcheck
181 \def\SouL@cmdcheck{%
182   \expandafter\ifx\SouL@cmd\SouL@temp
183   \else
184     \edef\SouL@temp*\expandafter\string\SouL@cmd}%
185   \QPackageWarningNoLine{soulutf8}{%
186     Command \SouL@temp* has changed.\MessageBreak
187     Supported versions of package ‘soul’: 2003/11/17.\MessageBreak
188     Depending on the unknown changes the redefinition\MessageBreak
189     of \SouL@temp* may not behave correctly}%
190   }%
191   \fi
192 \expandafter\endgroup
193 \expandafter\def\SouL@cmd
194 }

```

2.5 Redefinition of \SOUL@eval

\SOUL@eval Macro \SOUL@eval is redefined to add detection of the first byte of a UTF-8 sequence. Because \SOUL@eval is overwritten, a warning is issued, if the contents of \SOUL@eval is not as expected.

```
195 \SouL@redefine\SOUL@eval{%
```

First the expected definition.

```

```

2.7.1 Redefinition of \SOuL@splittoken

- \SOuL@splittoken Macro \SOuL@splittoken separates the first token or token group from a word and redefines the word to contain the remaining tokens. However if the remaining

tokens are a token group, then the curly braces will be removed and the token group is splitted by the next call of `\SOUL@splittoken`. The redefinition avoids the removal of curly braces around the remaining tokens.

```
496 \SOUL@redefine\SOUL@splittoken#1#2\SOUL@stop{%
497   \global\SOUL@token={#1}%
498   \global\SOUL@word={#2}%
499 }#1{%
500   \global\SOUL@token={#1}%
501   \SOUL@remainingtoken\relax
502 }

\SOUL@remainingtoken

503 \def\SOUL@remainingtoken#1\SOUL@stop{%
504   \global\SOUL@word=\expandafter{\@gobble#1}%
505 }
```

2.8 Patches

The fixed `\SOUL@splittoken` allows to remove the double sets of curly braces in other macros of package soul. The benefit is that implicate kernings are more often detected and fixes a bug in package soul. The disadvantage is incompatibility. The width of the resulting strings may change.

```

4 Installation

4.1 Download

Package. This package is available on CTAN¹:

[CTAN:macros/latex/contrib/oberdiek/soulutf8.dtx](http://ctan.org/tex-archive/macros/latex/contrib/oberdiek/soulutf8.dtx) The source file.

¹[ftp://ftp.ctan.org/tex-archive/](http://ftp.ctan.org/tex-archive/)

Bundle. All the packages of the bundle ‘oberdiek’ are also available in a TDS compliant ZIP archive. There the packages are already unpacked and the documentation files are generated. The files and directories obey the TDS standard.

[CTAN:install/macros/latex/contrib/oberdiek.tds.zip](#)

TDS refers to the standard “A Directory Structure for \TeX Files” ([CTAN:tds/tds.pdf](#)). Directories with `texmf` in their name are usually organized this way.

4.2 Bundle installation

Unpacking. Unpack the `oberdiek.tds.zip` in the TDS tree (also known as `texmf` tree) of your choice. Example (linux):

```
unzip oberdiek.tds.zip -d ~/texmf
```

Script installation. Check the directory `TD\$:scripts/oberdiek/` for scripts that need further installation steps. Package `attachfile2` comes with the Perl script `pdfatfi.pl` that should be installed in such a way that it can be called as `pdfatfi`. Example (linux):

```
chmod +x scripts/oberdiek/pdfatfi.pl
cp scripts/oberdiek/pdfatfi.pl /usr/local/bin/
```

4.3 Package installation

Unpacking. The `.dtx` file is a self-extracting `docstrip` archive. The files are extracted by running the `.dtx` through plain \TeX :

```
tex soulutf8.dtx
```

TDS. Now the different files must be moved into the different directories in your installation TDS tree (also known as `texmf` tree):

<code>soulutf8.sty</code>	→ <code>tex/generic/oberdiek/soulutf8.sty</code>
<code>soulutf8.pdf</code>	→ <code>doc/latex/oberdiek/soulutf8.pdf</code>
<code>test/soulutf8-test1.tex</code>	→ <code>doc/latex/oberdiek/test/soulutf8-test1.tex</code>
<code>test/soulutf8-test2.tex</code>	→ <code>doc/latex/oberdiek/test/soulutf8-test2.tex</code>
<code>test/soulutf8-test3.tex</code>	→ <code>doc/latex/oberdiek/test/soulutf8-test3.tex</code>
<code>test/soulutf8-test4.tex</code>	→ <code>doc/latex/oberdiek/test/soulutf8-test4.tex</code>
<code>test/soulutf8-test5.tex</code>	→ <code>doc/latex/oberdiek/test/soulutf8-test5.tex</code>
<code>soulutf8.dtx</code>	→ <code>source/latex/oberdiek/soulutf8.dtx</code>

If you have a `docstrip.cfg` that configures and enables `docstrip`’s TDS installing feature, then some files can already be in the right place, see the documentation of `docstrip`.

4.4 Refresh file name databases

If your \TeX distribution (te \TeX , mikte \TeX , ...) relies on file name databases, you must refresh these. For example, te \TeX users run `texhash` or `mktexlsr`.

4.5 Some details for the interested

Attached source. The PDF documentation on CTAN also includes the `.dtx` source file. It can be extracted by AcrobatReader 6 or higher. Another option is `pdftk`, e.g. unpack the file into the current directory:

```
pdftk soulutf8.pdf unpack_files output .
```

Unpacking with L^AT_EX. The .dtx chooses its action depending on the format:

plain T_EX: Run docstrip and extract the files.

L^AT_EX: Generate the documentation.

If you insist on using L^AT_EX for docstrip (really, docstrip does not need L^AT_EX), then inform the autodetect routine about your intention:

```
latex \let\install=y\input{soulutf8.dtx}
```

Do not forget to quote the argument according to the demands of your shell.

Generating the documentation. You can use both the .dtx or the .drv to generate the documentation. The process can be configured by the configuration file `ltxdoc.cfg`. For instance, put this line into this file, if you want to have A4 as paper format:

```
\PassOptionsToClass{a4paper}{article}
```

An example follows how to generate the documentation with pdflat^AT_EX:

```
pdflatex soulutf8.dtx
makeindex -s gind.ist soulutf8.idx
pdflatex soulutf8.dtx
makeindex -s gind.ist soulutf8.idx
pdflatex soulutf8.dtx
```
