

# The `amsmidx` package

American Mathematical Society  
Barbara Beeton

Version 2.01, 2004/08/03

## 1 Introduction

This package provides the facility to produce multiple indexes with  $\mathcal{A}\mathcal{M}\mathcal{S}$ - $\mathcal{L}\mathcal{A}\mathcal{T}\mathcal{E}\mathcal{X}$  document classes (particularly `amsbook` and the AMS author packages for books), superseding the built-in index facility which can accommodate only one index. This may in the future be incorporated as an option into the  $\mathcal{A}\mathcal{M}\mathcal{S}$ - $\mathcal{L}\mathcal{A}\mathcal{T}\mathcal{E}\mathcal{X}$  document classes.

This package is based on `multind.sty` by F.W. Long.  
Standard file identification.

```
1 \NeedsTeXFormat{LaTeX2e}[1995/06/01]
2 \ProvidesPackage{amsmidx}[2004/08/03 v2.01 multiple indexes for AMS classes]
```

## 2 User instructions

In the preamble, invoke `\makeindex` with a file name to provide as many indexes as desired:

```
\makeindex{filename-a}
\makeindex{filename-b}
```

This will initiate the creation of `filename-a.idx` etc.

In the body of the text, use the `\index` command with two arguments

```
\index{filename-a}{index term}
```

as appropriate to populate the `.idx` files.

In the `\backmatter` segment of the driver file, insert the `\Printindex` command to print the indexes; the second argument gives the title to be printed at the top of the index:

```
\Printindex{filename-a}{First Index}
\Printindex{filename-b}{Second Index}
```

On the first pass, the `.idx` files will be created. Process each `.idx` file with *MakeIndex* to generate an `.ind` file, which will then be read in by `\Printindex`. Whenever any page references change, be sure to run *MakeIndex* again, and process the entire job with  $\mathcal{L}\mathcal{A}\mathcal{T}\mathcal{E}\mathcal{X}$  once more to get the correct page references in the indexes.

To include a paragraph of comments below the index title, insert the text as an `\indexcomment` before the relevant `\Printindex`:

```
\indexcomment{Text of comments}
\Printindex{...}{...}
```

The `\indexcomment` text will be cleared after use.

### 3 Implementation

- `makeindex` Redefine `\makeindex` to create a new `.idx` file with the name provided by argument #1.
- ```

3 \renewcommand{\makeindex}[1]{%
4 \begingroup
5 \makeatletter
6 \if@filesw \expandafter\newwrite\csname #1@idxfile\endcsname
7 \expandafter\immediate\openout \csname #1@idxfile\endcsname #1.idx\relax
8 \typeout{Writing index file #1.idx }\fi
9 \endgroup}

```
- `index` Redefine `\index` to specify into which file/index the term is to be placed. Argument #1 identifies the file, #2 provides the text of the term to be indexed.
- ```

10 \renewcommand{\index}[1]{%
11 \@bsphack
12 \begingroup
13 \def\protect##1{\string##1\space}\@sanitize\@wrindex{#1}}

```
- `@wrindex` `\@wrindex` checks to make sure that the requested file is available, and writes an entry into the file or emits an error message.
- ```

14 \renewcommand{\@wrindex}[2]{%
15 \let\thepage\relax
16 \xdef\@gtempa{%
17 \ifundefined{#1@idxfile}{%
18 \PackageError{\@packagename}{%
19 The requested file, #1@idxfile.idx, does not exist;\MessageBreak
20 index term #2 will not be written out.%
21 }%
22 }{%
23 \expandafter\write\csname #1@idxfile\endcsname
24 {\string\indexentry{#2}{\thepage}}%
25 }%
26 }%
27 \endgroup\@gtempa
28 \if@nobreak \ifvmode\nobreak\fi\fi
29 \@esphack
30 }

```
- `printindex` Redefine `\printindex` to specify the file to be included; provide an alternate command `\Printindex` that specifies both the file and the index title to be printed. Argument #1 identifies the file, #2 provides the title. Also modify some formatting commands to improve the appearance of index entries, especially long ones in the presence of three index levels.
- ```

31 \renewcommand{\printindex}[1]{\@input{#1.ind}}
32 \newcommand{\Printindex}[2]{%
33 \begingroup
34 \cleardoublepage
35 \def\indexname{#2}%
36 \raggedright
37 \hyphenpenalty=10000
38 \renewcommand{\seename}{see-also}
39 \renewcommand{\subitem}{\par\hangindent 3em\hspace*{1em}}
40 \@input{#1.ind}%
41 \endgroup
42 }

```
- `indexcomment` Format comments in a block somewhat narrower than the full page width, and
- `indexchap` redefine `\indexchap` to insert the block below the title, before starting the

two-column index. Clear out `\indexcomment` after use.

```

43 \newdimen\@indexcommentwidth
44 \@indexcommentwidth=\textwidth
45 \ifdim\@indexcommentwidth > 26pc
46   \advance\@indexcommentwidth-6pc
47 \else
48   \advance\@indexcommentwidth-4pc
49 \fi
50 \newcommand{\indexcomment}[1]{%
51   \def\theindexcomment{%
52     \vskip\baselineskip
53     \parbox[t]{\@indexcommentwidth}{\normalsize\mdseries#1}%
54   }%
55 }
56 \let\theindexcomment\@empty
57 \renewcommand{\indexchap}[1]{%
58   \global\topskip 7.5pc\relax
59   \twocolumn[\fontsize{\@xivpt}{18}%
60     \vskip\topskip\vskip-\baselineskip\hbox{}}% adjust top space
61   \bfseries\centering #1\par
62   \ifx\theindexcomment\@empty
63     \else \theindexcomment
64     \global\let\theindexcomment\@empty
65   \fi
66   ]%
67   \global\topskip 34\p@
68 }

```

The usual `\endinput` to ensure that random garbage at the end of the file doesn't get copied by `docstrip`.

```
69 \endinput
```

## Index

Numbers written in *italics* refer to the page where the corresponding entry is described; numbers underlined refer to the code line of the definition; numbers in *roman* refer to the code lines where the entry is used.
