

Generating the index and chage log for the Babel system

Johannes Braams

2008/03/21

1 Description

This file contains the source for the style files for the `MakeIndex` program. These are needed to produce the index for the complete source listing and to produce the listing of the changes.

2 The index and the list of changes

Most of the entries are the same as in the files `gind.ist` and `gglo.ist` from the `doc` package.

```
1 <*idx j glo>
2 actual '='
3 quote '!'
4 level '>'
5 </idx j glo>
```

Because the `babel` system consists of so many files the default codeline numbering scheme of the `doc` package has been adapted. The line numbers consist of two parts seperated with a dot. This has to made known to the `MakeIndex` program when it produces the index.

```
6 <+idx>page_compositor ". "
```

Any further entries are again copied from `gind.ist` and `gglo.ist`.

```
7 <*idx>
8 preamble
9 "\n \\begin{theindex} \n \\makeatletter\\scan@allowedfalse\n"
10 postamble
11 "\n\n \\end{theindex}\n"
12 </idx>
13 <*glo>
14 preamble
15 "\n \\begin{theglossary} \n
16     \\makeatletter\\scan@allowedfalse\n"
17 postamble
18 "\n\n \\end{theglossary}\n"
19 keyword "\\glossaryentry"
20 </glo>
21 <+idx j glo>item_x1    "\\efill \n \\subitem "
22 <+idx>item_x2    "\\efill \n \\subsubitem "
23 <+glo>item_x2    "\\ "
24 <*idx j glo>
25 delim_0    "\\pfill "
26 delim_1    "\\pfill "
27 delim_2    "\\pfill "
28 % The next lines will produce some warnings when
29 % running Makeindex as they try to cover two different
```

```
30 % versions of the program:  
31 lethead_prefix    "{\\bfseries\\hfil "  
32 lethead_suffix    "\\hfil}\\nopagebreak\\n"  
33 </idx j glo>  
34 <+idx>lethead_flag      1  
35 <+glo>lethead_flag      0  
36 <*idx j glo>  
37 heading_prefix    "{\\bfseries\\hfil "  
38 heading_suffix    "\\hfil}\\nopagebreak\\n"  
39 </idx j glo>  
40 <+idx>headings_flag      1  
41 <+glo>headings_flag      0
```
