

The `ltxcmds` package

Heiko Oberdiek

<heiko.oberdiek at googlemail.com>

2011/11/09 v1.22

Abstract

The package `ltxcmds` exports some utility macros from the L^AT_EX kernel into a separate namespace and also provides them for other formats such as plain-T_EX.

1 Documentation

1.1 Introduction

Many of my packages also support other formats such as plain-T_EX. Because I am rather familiar with the utility macros from L^AT_EX's kernel (e.g. \@gobble, \@firstoftwo), I found myself rewriting them again and again, because they are lacking in plain-T_EX.

Therefore this package provides often used macros and similar ones with the name prefix \ltx@. This avoids also faulty redefinitions. I remember an example where a package redefined \@firstoftwo with forgetting \long.

1.2 Numbers

\ltx@zero	→ 0
\ltx@one	→ 1
\ltx@two	→ 2
\ltx@cclv	→ 255
\ltx@minusone	→ -1

These commands are numbers 0, 1, 2, 255 and -1. They are not digits and a space is not gobbled afterwards. Macro \ltx@minusone is available since version 2010/12/12 v1.15.

1.3 Scratch registers

Following the conventions of plain T_EX and L^AT_EX the first ten registers are free to use. Even numbered registers are for local, odd numbered for global use.

\ltx@(Loc,Glob)(Toks,Dimen,Skip)(A,B,C,D,E)

The name consists of the prefix \ltx@, then Loc or Glob for local or global usage follows. The register type is given by Toks for token register, Dimen for dimen register and Skip for skip register. As last part the registers are numbered from A to E. Example: \ltx@LocToksA.

Since 2011/04/14 v1.19.

1.4 Argument killers

\ltx@gobble {\langle 1\rangle}	→
\ltx@gobbletwo {\langle 1\rangle} {\langle 2\rangle}	→
\ltx@gobblethree {\langle 1\rangle} {\langle 2\rangle} {\langle 3\rangle}	→
\ltx@gobblefour {\langle 1\rangle} {\langle 2\rangle} {\langle 3\rangle} {\langle 4\rangle}	→

\ltx@GobbleNum {\langle num\rangle} {\langle 1\rangle} {\langle 2\rangle} ... {\langle\langle num\rangle\rangle} →
--

The first argument *num* of macro \ltx@GobbleNum specifies, how many following arguments are eaten. Macro \ltx@GobbleNum is expandable in exact two expansion steps.

1.5 Argument grabbers

\ltx@firstofone {\langle 1\rangle}	$\rightarrow \langle 1\rangle$
\ltx@firstoftwo {\langle 1\rangle} {\langle 2\rangle}	$\rightarrow \langle 1\rangle$
\ltx@secondoftwo {\langle 1\rangle} {\langle 2\rangle}	$\rightarrow \langle 2\rangle$
\ltx@firstofthree {\langle 1\rangle} {\langle 2\rangle} {\langle 3\rangle}	$\rightarrow \langle 1\rangle$
\ltx@secondofthree {\langle 1\rangle} {\langle 2\rangle} {\langle 3\rangle}	$\rightarrow \langle 2\rangle$
\ltx@thirdofthree {\langle 1\rangle} {\langle 2\rangle} {\langle 3\rangle}	$\rightarrow \langle 3\rangle$
\ltx@firstoffour {\langle 1\rangle} {\langle 2\rangle} {\langle 3\rangle} {\langle 4\rangle}	$\rightarrow \langle 1\rangle$
\ltx@secondoffour {\langle 1\rangle} {\langle 2\rangle} {\langle 3\rangle} {\langle 4\rangle}	$\rightarrow \langle 2\rangle$
\ltx@thirdoffour {\langle 1\rangle} {\langle 2\rangle} {\langle 3\rangle} {\langle 4\rangle}	$\rightarrow \langle 3\rangle$
\ltx@fourthoffour {\langle 1\rangle} {\langle 2\rangle} {\langle 3\rangle} {\langle 4\rangle}	$\rightarrow \langle 4\rangle$

Macros `\ltx@firstofthree`, `\ltx@secondofthree` and `\ltx@thirdofthree` were added in version 2010/11/12 v1.11. Macros `\ltx@firstoffour`, ..., `\ltx@fourthoffour` were added in version 2011/02/04 v1.16.

1.6 List helpers

\ltx@carzero ... \@nil	\rightarrow
\ltx@cdrzero ... \@nil	$\rightarrow \dots$

\ltx@car {\langle 1\rangle} ... \@nil	$\rightarrow \langle 1\rangle$
\ltx@cdr {\langle 1\rangle} ... \@nil	$\rightarrow \dots$

\ltx@cartwo {\langle 1\rangle} {\langle 2\rangle} ... \@nil	$\rightarrow \langle 1\rangle\langle 2\rangle$
\ltx@carsecond {\langle 1\rangle} {\langle 2\rangle} ... \@nil	$\rightarrow \langle 2\rangle$
\ltx@cdrtwo {\langle 1\rangle} {\langle 2\rangle} ... \@nil	$\rightarrow \dots$

\ltx@carthree {\langle 1\rangle} {\langle 2\rangle} {\langle 3\rangle} ... \@nil	$\rightarrow \langle 1\rangle\langle 2\rangle\langle 3\rangle$
\ltx@carthird {\langle 1\rangle} {\langle 2\rangle} {\langle 3\rangle} ... \@nil	$\rightarrow \langle 3\rangle$
\ltx@cdrthree {\langle 1\rangle} {\langle 2\rangle} {\langle 3\rangle} ... \@nil	$\rightarrow \dots$

\ltx@carfour {\langle 1\rangle} {\langle 2\rangle} {\langle 3\rangle} {\langle 4\rangle} ... \@nil	$\rightarrow \langle 1\rangle\langle 2\rangle\langle 3\rangle\langle 4\rangle$
\ltx@carfourth {\langle 1\rangle} {\langle 2\rangle} {\langle 3\rangle} {\langle 4\rangle} ... \@nil	$\rightarrow \langle 4\rangle$
\ltx@cdrfour {\langle 1\rangle} {\langle 2\rangle} {\langle 3\rangle} {\langle 4\rangle} ... \@nil	$\rightarrow \dots$

\ltx@CarNum {\langle num\rangle} {\langle 1\rangle} ... {\langle num+1\rangle} ... \@nil	$\rightarrow \{\langle 1\rangle\} \dots \{\langle num\rangle\} \dots$
\ltx@CarNumth {\langle num\rangle} {\langle 1\rangle} ... {\langle num+1\rangle} ... \@nil	$\rightarrow \{\langle num\rangle\} \dots$
\ltx@CdrNum {\langle num\rangle} {\langle 1\rangle} ... {\langle num+1\rangle} ... \@nil	$\rightarrow \{\langle num+1\rangle\} \dots$

Macros with uppercase letters are expandable in two expansion steps. Changes in version 2011/11/09 v1.22:

- Macros `\ltx@carsecond`, `\ltx@carthird`, `\ltx@carfourth`, `\ltx@CarNumth` added.
- Macros `\ltx@cdr`, `\ltx@cdrtwo`, `\ltx@cdrthree`, `\ltx@cdrfour`, `\ltx@CdrNum` are expandable in two expansion steps and retain spaces and braces after the first gobbled arguments.

1.7 Tail recursion

<code>\ltx@ReturnAfterFi {\langle 1 \rangle} \fi</code>	\rightarrow	<code>\fi \langle 1 \rangle</code>
<code>\ltx@ReturnAfterElseFi {\langle 1 \rangle} \else {\langle 2 \rangle} \fi</code>	\rightarrow	<code>\fi \langle 1 \rangle</code>

1.8 Empty macro

<code>\ltx@empty</code>	\rightarrow	
-------------------------	---------------	--

1.9 Characters

<code>\ltx@space</code>	\rightarrow	<code>\quad</code>
<code>\ltx@percentchar</code>	\rightarrow	<code>%</code>
<code>\ltx@backslashchar</code>	\rightarrow	<code>\</code>
<code>\ltx@hashchar</code>	\rightarrow	<code>#</code> (since v1.7)
<code>\ltx@leftbracechar</code>	\rightarrow	<code>{</code> (since v1.8)
<code>\ltx@rightbracechar</code>	\rightarrow	<code>}</code> (since v1.8)

1.10 Boolean switch

<code>\ltx@newif {\langle cmd \rangle}</code>

`\ltx@newif` defines a new boolean switch $\langle cmd \rangle$ like `\newif`. Unlike plain T_EX's `\newif`, `\ltx@newif` is not `\outer`. The command $\langle cmd \rangle$ must start with the two characters `if`.

<code>\ltx@newglobalif {\langle cmd \rangle}</code>

`\ltx@newglobalif` defines a new boolean switch $\langle cmd \rangle$ like `\ltx@newif`. However the switch setting commands, $\langle cmd \rangle$ without the prefix `if` and followed by `true` or `false` are acting globally.

1.11 Command definitions

<code>\ltx@ifundefined {\langle cmd \rangle} {\langle yes \rangle} {\langle no \rangle}</code>
--

If ε -T_EX is available, `\ifcsname` is used that does not have the side effect of defining undefined commands with meaning of `\relax`. This command is always expandable. Change in version 1.1: Also the meaning `\relax` is always considered “undefined”.

```
\ltx@ifcsname {\⟨cmd⟩} {\⟨yes⟩} {\⟨no⟩}
```

If ε - \TeX is available, $\ltx@ifcsname$ is used that does not have the side effect of defining undefined commands with meaning of \relax . Also it always checks for the meaning of \relax and considers this as undefined. This macro is not expandable without ε - \TeX .

```
\ltx@LocalExpandAfter
```

It expands the token after the next token but in a local context. That is the difference to \expandafter . The local context discards the side effect of \csname and let the command undefined after the expansion step.

1.12 Stripping

```
\ltx@RemovePrefix  
\ltx@StripPrefix
```

All tokens up to and including the next available character ‘>’ are thrown away. Usually it is used to strip the first part of the output of the commands \meaning or \pdflastmatch . Macro $\ltx@RemovePrefix$ has the same meaning as \LaTeX ’s $\strip@prefix$, whereas macro $\ltx@StripPrefix$ expands the next token once before stripping the prefix.

```
\ltx@onelvel@sanitize {\⟨macro⟩}
```

Macro $\ltx@onelvel@sanitize$ provides \LaTeX ’s $\@onelvel@sanitize$. The macro is expanded once and the contents is converted to characters with catcode 12 (other) and space tokens with catcode 10 (space). Then then sanitized contents is stored into the macro again. Since version 1.12.

1.13 File management

All macros in this section are expandable like the counterparts of the \LaTeX kernel. Also they can be used after the preamble.

1.13.1 File extensions

```
\ltx@clsextension  
\ltx@pkgextension
```

Macros $\ltx@clsextension$ and $\ltx@styextension$ stores the strings cls and sty . In opposite to \LaTeX ’s $\@clsextension$ and $\@styextension$ they can also be used after $\begin{document}$.

1.13.2 Load check

```
\ltx@ifclassloaded {\⟨class⟩} {\⟨yes⟩} {\⟨no⟩}  
\ltx@ifpackageloaded {\⟨package⟩} {\⟨yes⟩} {\⟨no⟩}
```

Macros $\ltx@ifclassloaded$ / $\ltx@ifpackageloaded$ execute $\langle yes \rangle$, if the $\langle class \rangle$ or $\langle package \rangle$ is loaded, otherwise $\langle no \rangle$ is called. Both $\langle class \rangle$ and $\langle package \rangle$ are specified without extension. The macros can also be used after $\begin{document}$.

```
\ltx@iffileloaded {\⟨file⟩} {\⟨yes⟩} {\⟨no⟩}
```

If \LaTeX 's `\ProvidesFile` macro was called before using $\langle file \rangle$ as argument, then `\ltx@iffileloaded` calls $\langle yes \rangle$, otherwise $\langle no \rangle$. Therefore it is possible that the $\langle file \rangle$ is loaded, but $\langle no \rangle$ is executed because of a missing `\ProvidesFile`. The \TeX kernel does not have a counterpart of `\ltx@iffileloaded`.

Note that the file name used in `\ProvidesFile` and `\ltx@iffileloaded` must match. For example, if \TeX 's default extension `.tex` was given in the first command, then it must also be specified in the latter command and vice versa.

1.13.3 Version date check

```
\ltx@ifclasslater {\⟨class⟩} {\⟨date⟩} {\⟨yes⟩} {\⟨no⟩}
\ltx@ifpackagelater {\⟨package⟩} {\⟨date⟩} {\⟨yes⟩} {\⟨no⟩}
\ltx@iffilelater {\⟨file⟩} {\⟨date⟩} {\⟨yes⟩} {\⟨no⟩}
```

If a `\ProvidesClass`/`\ProvidesPackage`/`\ProvidesFile` command with exactly the same class/package/file was executed before with an optional argument that starts with a \LaTeX version date, then this version date is compared with the argument $\langle date \rangle$. If they are equal or if the version date is the later date, then $\langle yes \rangle$ is called. In all other cases $\langle no \rangle$ is executed.

A \LaTeX date has the format `YYYY/MM/DD` with `YYYY` as year with four digits, `MM` as month with two digits and `DD` as day with two digits. If $\text{pdf}\text{\TeX}$'s `\pdfmatch` is available, then it is used to detect the version date, to reject invalid date formats and to reject some invalid dates. Dates before `1994/01/01` are always invalid, because version dates are introduced with $\text{\LaTeX} 2_{\varepsilon}$ in 1994.

1.14 Macro additions

```
\ltx@GlobalAppendToMacro {\⟨cmd⟩} {\⟨addition⟩}
\ltx@LocalAppendToMacro {\⟨cmd⟩} {\⟨addition⟩}
```

The $\langle addition \rangle$ is appended to the parameterless macro $\langle cmd \rangle$. If $\langle cmd \rangle$ is undefined or has the meaning `\relax`, then it will be initialized as empty macro beforehand. Due to a bug $\langle addition \rangle$ must not contain `\par` before version 2010/10/25 v1.9.

```
\ltx@GlobalPrependToMacro {\⟨cmd⟩} {\⟨addition⟩}
\ltx@LocalPrependToMacro {\⟨cmd⟩} {\⟨addition⟩}
```

The $\langle addition \rangle$ is prepended to the parameterless macro $\langle cmd \rangle$. If $\langle cmd \rangle$ is undefined or has the meaning `\relax`, then it will be initialized as empty macro beforehand. The macros were added in version 2011/08/22 v1.21.

1.15 Next character detection

```
\ltx@ifnextchar {\⟨char⟩} {\⟨yes⟩} {\⟨no⟩}
```

If next character is $\langle char \rangle$ then $\langle yes \rangle$ is called, otherwise $\langle no \rangle$. The character is not removed. Spaces are silently removed when looking for $\langle char \rangle$ as \TeX 's version `\kernel@ifnextchar` does. But there are also small differences:

- The space can be used as $\langle char \rangle$. In this case optional spaces before $\langle char \rangle$ are not supported of course.

- If the optional space is a command that is a character (defined by `\let` or `\futurelet`), then `\kernel@ifnextchar` breaks with an TeX error. `\ltx@ifnextchar` silently removes this token as optional space.

Since 2010/03/01 v1.3.

`\ltx@ifnextchar@nospace {\langle char \rangle} {\langle yes \rangle} {\langle no \rangle}`

Macro `\ltx@ifnextchar@nospace` behaves like macro `\ltx@ifnextchar` with the exception that optional spaces are not supported before `\langle char \rangle`. Since 2011/04/14 v1.19.

1.16 `\ltx@leavevmode`, `\ltx@mbox`

`\ltx@leavevmode`

Macro `\ltx@leavevmode` calls pdfTeX's `\quitvmode`. Otherwise `\leavevmode` is used and defined if it is necessary.

`\ltx@mbox`

Macro `\ltx@mbox` reimplements `\mbox` with two changes. Instead of `\leavevmode` it uses `\ltx@leavevmode` and stops right after `\hbox`. Especially it does not grab the argument and allows the extended syntax of `\hbox`.

1.17 Expandable test for emptiness

`\ltx@ifempty {\langle stuff \rangle} {\langle yes \rangle} {\langle no \rangle}`

Macro `\ltx@ifempty` checks in exact two expansion steps whether `\langle stuff \rangle` is empty or contains token. Depending on the result `\langle yes \rangle` or `\langle no \rangle` is executed. The token in `\langle stuff \rangle` may contain `\par` and unmatched conditionals (`\if`, `\else`, `\fi`, ...). Since version 2010/11/12 v1.11.

`\ltx@ifblank {\langle stuff \rangle} {\langle yes \rangle} {\langle no \rangle}`

Macro `\ltx@ifblank` tests in exact two expansion steps if `\langle stuff \rangle` is empty or contain only blank spaces. In this case argument `\langle yes \rangle` is called. If `\langle stuff \rangle` contains other tokens than spaces then `\langle no \rangle` is executed. Since version 2010/12/04 v1.13.

1.18 Stripping spaces

`\ltx@zapspace {\langle stuff \rangle}`

Macro `\ltx@zapspace` strips spaces from `\langle stuff \rangle` that are not hidden inside curly braces. Like L^AT_EX's `\zap@space` it is expandable. Differences:

- Syntax: `\zap@space` also expects a space token and `\empty` after `\langle stuff \rangle`.
- Macro `\ltx@zapspace` is expandable in exact two expansion steps.
- Macro `\ltx@zapspace` always retains curly braces.
- Macro `\zap@space` has a bug. It stops stripping spaces after a token group in curly braces if the first two tokens inside the group are equal.

- Macro `\ltx@zapspace` also works with `\par` and conditionals (`\if`, `\else`, `\fi`, ...).

Macro `\ltx@zapspace` is available since version 2010/12/07 v1.14.

1.19 Check for emptiness of boxes

```
\ltx@ifboxempty {\boxregister} {\yes} {\no}
```

Macro `\ltx@ifboxempty` calls `\yes` if the box exists (`\ifvoid` returns false) and the box does not contain any content. Otherwise if the box is void or contains something, then `\no` is executed. Thus being empty means that the box exists and is either an `\hbox` or a `\vbox` and may even have dimensions other than 0.0 pt, but the box does not contain anything. Macro `\ltx@ifboxempty` is available since 2010/02/04 v1.16.

```
\ltx@ifboxvoidorempty {\boxregister} {\yes} {\no}
```

Macro `\ltx@ifboxvoidorempty` calls `\yes` if the box is either void or does not contain any content. Otherwise `\no` is executed. Macro `\ltx@ifboxvoidorempty` is available since 2010/02/04 v1.16.

2 Implementation

2.1 Identification

1 `(*package)`

Reload check, especially if the package is not used with L^AT_EX.

```

\LTXcmds@@ifnextchar \futurelet does not distinguish between a character and a command that is a
character (defined by using \let or \futurelet). Therefore the space is caught
by \roman numeral with negative character constant that gobbles one optional
space.

2.20 \ltx@IfBoxEmpty

In case of ε -TeX the test for an empty box is done via `\lastnodetype` as suggested by David Kastrup [9].

```
651 \ltx@IfUndefined{\lastnodetype}{%
652   \catcode`\$=9 %
653   \catcode`\&=14 %
654 }{%
655   \catcode`\$=14 %
656   \catcode`\&=9 %
657 }
```

```
\ltx@IfBoxEmpty
658 \def\ltx@IfBoxEmpty#1{%
659   \ifvoid#1\relax
660     \expandafter\ltx@secondoftwo
661   \else
```

Implementation using ε -TeX's `\lastnodetype`.

```
662 & \begingroup
663 &   \setbox\ltx@zero=\ifhbox#1\hbox\else\vbox\fi{%
664 &     \ifhmode\unhcopy\else\unvcopy\fi#1\relax
665 &     \expandafter
666 &   }%
667 &   \expandafter\endgroup
668 &   \ifnum\lastnodetype<\ltx@zero
669 &     \expandafter\expandafter\expandafter\ltx@firstoftwo
670 &   \else
671 &     \expandafter\expandafter\expandafter\ltx@secondoftwo
672 &   \fi
```

Implementation without ε -TeX using a signature at the beginning of the test box.

```
673 $ \begingroup
674 $   \setbox\ltx@zero=\ifhbox#1\hbox\else\vbox\fi{%
675 $     \penalty\ltx@one
676 $     \ifhmode\unhcopy\else\unvcopy\fi#1\relax
677 $     \expandafter
678 $   }%
679 $   \ifnum\lastpenalty=\ltx@one
```

Box 0 has been changed and is restored by closing the group.

```
680 $   \endgroup
681 $   \begingroup
682 $     \setbox\ltx@zero=\ifhbox#1\hbox\else\vbox\fi{%

4 Installation

4.1 Download

Package. This package is available on CTAN¹:

[CTAN:macros/latex/contrib/oberdiek/ltxcmds.dtx](http://ctan.org/macros/latex/contrib/oberdiek/ltxcmds.dtx) The source file.

[CTAN:macros/latex/contrib/oberdiek/ltxcmds.pdf](http://ctan.org/macros/latex/contrib/oberdiek/ltxcmds.pdf) Documentation.

Bundle. All the packages of the bundle ‘oberdiek’ are also available in a TDS compliant ZIP archive. There the packages are already unpacked and the documentation files are generated. The files and directories obey the TDS standard.

[CTAN:install/macros/latex/contrib/oberdiek.tds.zip](http://ctan.org/install/macros/latex/contrib/oberdiek.tds.zip)

TDS refers to the standard “A Directory Structure for TEX Files” ([CTAN:tds/tds.pdf](http://ctan.org/tds/tds.pdf)). Directories with `texmf` in their name are usually organized this way.

4.2 Bundle installation

Unpacking. Unpack the `oberdiek.tds.zip` in the TDS tree (also known as `texmf` tree) of your choice. Example (linux):

```
unzip oberdiek.tds.zip -d ~/texmf
```

¹[ftp://ftp.ctan.org/tex-archive/](http://ftp.ctan.org/tex-archive/)

Script installation. Check the directory `TD\$:scripts/oberdiek/` for scripts that need further installation steps. Package `attachfile2` comes with the Perl script `pdfatfi.pl` that should be installed in such a way that it can be called as `pdfatfi`. Example (linux):

```
chmod +x scripts/oberdiek/pdfatfi.pl
cp scripts/oberdiek/pdfatfi.pl /usr/local/bin/
```

4.3 Package installation

Unpacking. The `.dtx` file is a self-extracting `docstrip` archive. The files are extracted by running the `.dtx` through plain `\TeX`:

```
tex ltxcmds.dtx
```

TDS. Now the different files must be moved into the different directories in your installation TDS tree (also known as `texmf` tree):

ltxcmds.sty	→ tex/generic/oberdiek/ltxcmds.sty
ltxcmds.pdf	→ doc/latex/oberdiek/ltxcmds.pdf
test/ltxcmds-test1.tex	→ doc/latex/oberdiek/test/ltxcmds-test1.tex
test/ltxcmds-test-gobble.tex	→ doc/latex/oberdiek/test/ltxcmds-test-gobble.tex
test/ltxcmds-test-ifempty.tex	→ doc/latex/oberdiek/test/ltxcmds-test-ifempty.tex
test/ltxcmds-test-zapspace.tex	→ doc/latex/oberdiek/test/ltxcmds-test-zapspace.tex
test/ltxcmds-test-ifboxempty.tex	→ doc/latex/oberdiek/test/ltxcmds-test-ifboxempty.tex
test/ltxcmds-test-nextchar.tex	→ doc/latex/oberdiek/test/ltxcmds-test-nextchar.tex
test/ltxcmds-test-carcdr.tex	→ doc/latex/oberdiek/test/ltxcmds-test-carcdr.tex
ltxcmds.dtx	→ source/latex/oberdiek/ltxcmds.dtx

If you have a `docstrip.cfg` that configures and enables `docstrip`'s TDS installing feature, then some files can already be in the right place, see the documentation of `docstrip`.

4.4 Refresh file name databases

If your `\TeX` distribution (`te\TeX`, `mik\TeX`, ...) relies on file name databases, you must refresh these. For example, `te\TeX` users run `texhash` or `mktexlsr`.

4.5 Some details for the interested

Attached source. The PDF documentation on CTAN also includes the `.dtx` source file. It can be extracted by AcrobatReader 6 or higher. Another option is `pdftk`, e.g. unpack the file into the current directory:

```
pdftk ltxcmds.pdf unpack_files output .
```

Unpacking with L^AT_EX. The `.dtx` chooses its action depending on the format:

plain `\TeX`: Run `docstrip` and extract the files.

L^AT_EX: Generate the documentation.

If you insist on using L^AT_EX for `docstrip` (really, `docstrip` does not need L^AT_EX), then inform the autodetect routine about your intention:

```
latex \let\install=y\input{ltxcmds.dtx}
```

Do not forget to quote the argument according to the demands of your shell.

Generating the documentation. You can use both the `.dtx` or the `.drv` to generate the documentation. The process can be configured by the configuration file `ltxdoc.cfg`. For instance, put this line into this file, if you want to have A4 as paper format:

```
\PassOptionsToClass{a4paper}{article}
```

An example follows how to generate the documentation with pdfL^AT_EX:

```
pdflatex ltxcmds.dtx
makeindex -s gind.ist ltxcmds.idx
pdflatex ltxcmds.dtx
makeindex -s gind.ist ltxcmds.idx
pdflatex ltxcmds.dtx
```

5 Catalogue

The following XML file can be used as source for the [TeX Catalogue](#). The elements `caption` and `description` are imported from the original XML file from the Catalogue. The name of the XML file in the Catalogue is `ltxcmds.xml`.

```
1502 <catalogue>
1503 <?xml version='1.0' encoding='us-ascii'?>
1504 <!DOCTYPE entry SYSTEM 'catalogue.dtd'>
1505 <entry datestamp='$Date$' modifier='$Author$' id='ltxcmds'>

7 History

[2009/08/05 v1.0]

- First version.

[2009/12/12 v1.1]

- Short title shortened.
- \ltx@ifUndefined added.

[2010/01/28 v1.2]

- \ltx@RemovePrefix and \ltx@StripPrefix added.
- \ltx@ifclassloaded, \ltx@ifpackageloaded, \ltx@iffileloaded, \ltx@ifclasslater, \ltx@ifpackagelater, \ltx@iffilelater, \ltx@clsextension, \ltx@pkgextension added.
- \ltx@GlobalAppendToMacro, \ltx@LocalAppendToMacro added.

[2010/03/01 v1.3]

- \ltx@newif added.
- \ltx@ifnextchar added.
- Numbers \ltx@zero, \ltx@one, \ltx@two, \ltx@cclv added.

[2010/03/09 v1.4]

- \ltx@pkgextension and \ltx@clsextension are hardcoded to avoid trouble with \onlypreamble.

[2010/04/08 v1.5]

- `\ltx@cartwo`, `\ltx@cdrtwo`, `\ltx@carthree`, `\ltx@cdrthree`,
`\ltx@carfour`, `\ltx@cdrfour` added.
- `\ltx@ReturnAfterFi` and `\ltx@ReturnAfterElseFi` fixed.

[2010/04/16 v1.6]

- `\ltx@leavevmode`, `\ltx@mbox` added.

[2010/04/26 v1.7]

- `\ltx@GobbleNum`, `\ltx@CdrNum`, `\ltx@CarNum` added.
- `\ltx@carzero`, `\ltx@cdrzero` added.
- `\ltx@hashchar` added.

[2010/09/11 v1.8]

- `\ltx@leftbracechar`, `\ltx@rightbracechar` added.

[2010/10/25 v1.9]

- `\ltx@LocalAppendToMacro` and `\ltx@GlobalAppendToMacro` are now
`\long`.

[2010/10/31 v1.10]

- `\ltx@newglobalif` added.

[2010/11/12 v1.11]

- `\ltx@ifempty` added.
- `\ltx@firstofthree`, `\ltx@secondofthree`, `\ltx@thirdofthree` added.

[2010/12/02 v1.12]

- `\ltx@onelevel@sanitize` added.
- `\LTXcmds@num` fixed for the case with `\numexpr` (bug found by GL).

[2010/12/04 v1.13]

- `\ltx@ifblank` added.
- Optimization for `\ltx@ifempty`.

[2010/12/07 v1.14]

- `\ltx@zapspace` added.

[2010/12/12 v1.15]

- `\ltx@minusone` added.

[2011/02/04 v1.16]

- `\ltx@IfBoxEmpty` and `\ltx@IfBoxVoidOrEmpty` added.
- `\ltx@firstoffour`, ..., `\ltx@fourthoffour` added.

[2011/02/05 v1.17]

- `\ltx@ifBoxEmpty`: an empty box may have non-zero dimensions.

[2011/03/16 v1.18]

- `\ltx@ifclasslater` fixed.

[2011/04/14 v1.19]

- `\ltx@ifnextchar`: detection of optional spaces modified.
- `\ltx(Loc,Glob)(Toks,Dimen,Skip)(A,B,C,D,E)` added.

[2011/04/18 v1.20]

- `\ltx@ifnextchar` with conditional support (thanks GL for bug report).

[2011/08/22 v1.21]

- `\ltx@GlobalPrependToMacro`, `\ltx@LocalPrependToMacro` added (feature request of Martin Münch).

[2011/11/09 v1.22]

- `\ltx@carsecond`, `\ltx@carthird`, `\ltx@carfourth`, `\ltx@CarNumth` added.
- `\ltx@cdrzero`, `\ltx@cdrone`, `\ltx@cdrtwo`, `\ltx@cdrthree`, `\ltx@cdrfour`, `\ltx@CdrNum` modified to retain braces and spaces. They are expandable in two expansion steps.

8 Index

Numbers written in italic refer to the page where the corresponding entry is described; numbers underlined refer to the code line of the definition; plain numbers refer to the code lines where the entry is used.
